Nonmetal Chemically, nonmetals have relatively high electronegativity or usually attract electrons in a chemical bond with another element, and their oxides tend to be acidic. Physically, they are usually lighter (less dense) than elements that form metals and are often poor conductors of heat and electricity. They range from colorless gases like hydrogen to shiny crystals like iodine. Industrial uses of nonmetals as the dominant component include in electronics, combustion, lubrication and machining In the context of the periodic table, a nonmetal is a chemical element that mostly lacks distinctive metallic properties. including nonmetals are widespread 8f9409ff3e
