30bbf71750 In August 2013, the initial service only allowed Android devices to be found. In April 2024 an expanded Find My Device network launched, enabling the crowdsourcing of data from Android phones & tablets to assist in finding other devices on the network via Bluetooth. This has allowed for offline finding, as well as support for more items on the service, such as tracker tags initially from Chipolo and Pebblebee. These trackers are marked as supporting Google's Find My Device network via a badge on their product marketing. The Find My Device network was announced in Google I/O 2023, to be released in July in the same year, before being delayed awaiting a new industry specification aimed to prevent unwanted tracking. A draft of this specification was released in December 2023, and has been implemented in iOS 17.5.
