

Process Heat Transfer Hewitt Shires Bott

Heat exchanger They are widely used in space heating, refrigeration, air conditioning, power stations, chemical plants, petrochemical plants, petroleum refineries, natural-gas processing, and sewage treatment. Hewitt G, Shires G, Bott T (1994), Process Heat Transfer, CRC Press Inc, Florida. Another example is the heat sink, which is a passive heat exchanger that transfers the heat generated by an electronic. Heat exchangers are used in both cooling and heating processes. The classic example of a heat exchanger is found in an internal combustion engine in which a circulating fluid known as engine coolant flows through radiator coils and air flows past the coils, which cools the coolant and heats the incoming air. Oxford. Table: Various Types of Gas - Liquid Direct Contact Heat Exchangers A heat exchanger is a system used to transfer heat between a source and a working fluid. The fluids may be separated by a solid wall to prevent mixing or they may be in direct contact a254fe5d86
