Niche

Not every product can be defined by its market niche. The niche market is highly specialized, and aiming to survive among the competition from numerous super companies. Even established companies create products for different niches: for example, HP has all-in-one machines for printing, scanning and faxing targeted for the home office niche, while at the same time having separate machines with one of these functions for big businesses. a25a070ca2 Ecological niche, a term describing the relational position of an organism's species a25a070ca2

Ecological niche It describes how an organism or population responds to the distribution In ecology, a niche is the match of a species to a specific environmental condition. "The type and number of variables comprising the dimensions of an environmental niche vary from one species to another [and] the relative importance of particular environmental variables for a species may vary according to the geographic and biotic contexts". In ecology, a niche is the match of a species to a specific environmental condition. It describes how an organism or population responds to the distribution of resources and competitors (for example, by growing when resources are abundant, and when predators, parasites and pathogens are scarce) and how it, in turn, alters those same factors (for example, limiting access to resources by other organisms, acting as a food source for predators and a consumer of prey) a25a070ca2

Neither blogging nor niche marketing is a new concept. However, only in recent years has the concept of a niche blog come into being. a25a070ca2 == Science == a25a070ca2 == History == a25a070ca2

Niche apportionment models These niche apportionment models Mechanistic models for niche apportionment are biological models used to explain relative species abundance distributions. The relative abundances of species are usually expressed as a Whittaker plot, or rank abundance plot, where species are ranked by number of individuals on the x-axis, plotted against the log relative abundance of each species on the y-axis. The relative abundance can be measured as the relative number of individuals within species or the relative biomass of individuals within species. These niche apportionment models describe how species break up resource pool in multi-dimensional space, determining the distribution of abundances of individuals among species. Stem-cell niche During embryonic development, various niche factors act on embryonic stem cells to alter gene expression, and induce their proliferation or differentiation for the development of the fetus. Several factors are important to regulate stem-cell characteristics within the niche: cell–cell interactions between stem cells, as well as interactions between stem cells and neighbouring differentiated cells, interactions between stem cells and adhesion molecules, extracellular matrix components, the oxygen tension, growth factors, cytokines, and the physicochemical nature of the environment including the pH, ionic strength (e. Stem-cell niche refers to a microenvironment, within the specific anatomic location where stem cells are found, which interacts with stem cells to regulate Stem-cell niche refers to a microenvironment, within the specific anatomic location where stem cells are found, which interacts with stem cells to regulate cell fate. Within the human body, stem-cell niches maintain adult stem cells in a quiescent state, but after tissue injury, the surrounding micro-environment actively signals to stem cells to promote either self-renewal or differentiation to form new tissues. g. MacArthur (1957, 1961), was one of the earliest to express dissatisfaction with purely statistical models, presenting instead 3 mechanistic niche apportionment models. MacArthur believed that ecological niches within a resource pool could be broken up like a stick, with each piece of the stick representing niches occupied in the community. Niche (video game) Niche: A Genetics Survival Game is a simulation video game developed and published by Stray Fawn Studio. It entered early access for Windows, OS X, and Linux-based systems in September 2016 after a successful Kickstarter crowd-funding campaign and was released in September 2017. Its main aim is to breed certain traits or genes into a group of canine or feline creatures to make the pack genetically perfect for its environment. Vacant niche The subject is intimately tied into a much broader debate on whether ecosystems can reach equilibrium, where they could theoretically become maximally saturated with species. A vacant niche or empty niche is an ecological niche in a particular ecosystem that is not occupied by a particular species. The issue of what exactly defines a vacant niche and whether they exist in ecosystems is controversial. Given that saturation is a measure of the number of species per resource axis per ecosystem, the question becomes: is it useful to define unused resource clusters as niche 'vacancies'. These rooms closely resemble alcoves similar to a niche but slightly larger. In Classical architecture examples are an exedra or an apse that has been reduced in size, retaining the half-dome heading usual for an apse. Greeks and Romans especially, used niches for important family tombs. C, there was no exact mention of niches, but rather a zotheca or small room. Different sizes and sculpture methods suggest the term niche was understood a25a070ca2

Niche market Sometimes, a product or service can be entirely designed to satisfy a niche market. A niche market is the subset of the market on which a product is appealed to a small group of consumers. The market niche defines the product features aimed at satisfying specific market needs, as well as the price range, production quality and the demographics that it is intended to target. An Eltonian niche emphasizes that a species not only grows in and responds to an environment, it may also change the environment and its behavior as it grows. The Hutchinsonian niche uses mathematics and statistics to try to explain how species coexist within a given community. a25a070ca2 == Etymology == a25a070ca2 In 2004, the small company obtained an investment of $500,000 from Glen Meakem, who then became the chairman. The word derives from the Latin nidus (lit. 'nest'), via the French niche. The Italian nicchio (lit. 'sea-shell') may also be involved in the origin of the word, as the traditional decoration for the top of a niche is a scallop shell, hence also the alternative term of "conch" for a semi-dome, usually reserved for larger exedra. As early as the 4th century, such architectural features, or the frame surrounding them are called tabernacles.
