Mutually orthogonal Latin squares A set of Latin squares, all of the same order, all pairs of which are orthogonal is called a set of mutually orthogonal Latin squares. multiples of four, and seemed to be aware of the following result. "Orthogonal" is thus synonymous with "independent" in that knowing one variable's value gives no further information about another variable's likely value. This concept of orthogonality in combinatorics is strongly related to the concept of blocking in statistics, which ensures that independent variables are truly independent with no hidden confounding correlations. No group based Graeco-Latin squares can exist if the order is an odd multiple of two (that In combinatorics, two Latin squares of the same size (order) are said to be orthogonal if when superimposed the ordered paired entries in the positions are all distinct bae409d1ae

Curve fitting Curve fitting can involve either interpolation, where an exact fit to the data is required, or smoothing, in which a "smooth" function is constructed that approximately fits the data. A related topic is regression analysis, which focuses more on questions of statistical inference such as how much uncertainty is present in a curve that is fitted to data observed with random errors. Fitted curves can be used as an aid for data visualization, to infer values of a function where no data are available, and to summarize the relationships among two or more variables. topic is regression analysis, which focuses more on questions of statistical inference such as how much uncertainty is present in a curve that is fitted Curve fitting is the process of constructing a curve, or mathematical function, that has the best fit to a series of data points, possibly subject to constraints. Extrapolation refers to the use of a fitted curve beyond the range of bae409d1ae

Cauchy distribution It is also known, especially among physicists, as the Lorentz distribution (after Hendrik Lorentz), Cauchy–Lorentz distribution, Lorentz(ian) function, or Breit–Wigner distribution. the fundamental solution for the Laplace equation in the upper half-plane. The Cauchy distribution. It is one of the few stable distributions with a probability density function The Cauchy distribution, named after Augustin-Louis Cauchy, is a continuous probability distribution
