Applications of artificial intelligence "Machine Learning in Automatic Speech Recognition: Artificial intelligence is the capability of computational systems to perform tasks typically associated with human intelligence, such as learning, reasoning, problem-solving, perception, and decision-making. In recent years, there have been massive advancements in the field of Generative Artificial Intelligence, which uses generative models to produce text, images, videos or other forms of data. Padmanabhan, Jayashree; Johnson Premkumar, Melvin Jose (4 July 2015). The subfield of Machine learning has been used for various scientific and commercial purposes including language translation, image recognition, decision-making, credit scoring, and e-commerce. October 2011 at the Wayback Machine. Artificial intelligence (AI) has been used in applications throughout industry and academia.

Within the field of Artificial Intelligence, there are multiple subfields. This article describes applications of e53f710265
