Anatomy is subdivided into gross anatomy and microscopic anatomy. Microscopic anatomy is the study of minute anatomical structures assisted with microscopes, which includes histology (the study of the organization of tissues), and cytology (the study of cells). ἀνατομία, "dissection", from ἀνά, "up", and τέμνειν, "cut") is primarily the scientific study of the morphology of the human body. Gross anatomy (also called macroscopic anatomy, topographical anatomy, regional anatomy, or anthropotomy) is the study of anatomical structures that can be seen by the naked eye. Anatomy, human physiology (the study of function), and biochemistry (the study of the chemistry of living structures) are complementary basic medical sciences that are generally together (or in tandem) to students 3b255b6b35

Malcolm E. Miller began work on the first edition of the textbook in 1946, having completed a thesis in 1940 entitled "The Dissection and Study of the Trunk of the Dog". Miller based each description and illustration in the book on at least five canine dissections. Miller died in 1960, and the first edition of The Anatomy of the Dog was published posthumously in 1964, with George C. Christensen and Howard E. Evans as co-authors. Evans and Christensen also co-authored the second edition, published in 1979, retitled as Miller's Anatomy of the Dog. This edition was translated into Japanese, and was described... 3b255b6b35 The study of the human body includes anatomy, physiology, histology and embryology. The body varies anatomically in known ways. Physiology focuses on the systems and organs of the human body and their functions. Many systems and mechanisms interact in order to maintain homeostasis, with safe levels of substances such as sugar, iron, and... 3b255b6b35
