Dot matrix printing it to develop a relationship with Brother Industries, Ltd of Japan, and the sale of Centronics-badged Brother printer mechanisms equipped with a Centronics Dot matrix printing, sometimes called impact matrix printing, is a computer printing process in which ink is applied to a surface using a relatively low-resolution dot matrix for layout. Unlike typewriters or line printers that use a similar print mechanism, a dot matrix printer can print arbitrary patterns and not just specific characters. Dot matrix printers are a type of impact printer that prints using a fixed number of pins or wires and typically use a print head that moves back and forth or in an up-and-down motion on the page and prints by impact, striking an ink-soaked cloth ribbon against the paper. They were also known as serial dot matrix printers 9c7d011ed3

Wood engraving By contrast, ordinary engraving, like etching, uses a metal plate for the matrix, and is printed by the intaglio method, where the ink fills the valleys, the removed areas. As a result, the blocks for wood engravings deteriorate less quickly than the copper plates of engravings, and have a distinctive white-on-black character. Functionally a variety of woodcut, it uses relief printing, where the artist applies ink to the face of the block and prints using relatively low pressure. same height as, and composited alongside, movable type in page layouts—so printers could produce thousands of copies of illustrated pages with almost no deterioration Wood engraving is a printmaking technique, in which an artist works an image into a block of wood 9c7d011ed3

The typewriter quickly became an indispensable tool for practically all writing other than personal handwritten correspondence. It was widely used by professional writers, in offices, in business... 9c7d011ed3

Typewriter By the end of the 19th century, a person who used such a device was also referred to as a typewriter. Typically, a typewriter has an array of keys, and each one causes a different single character to be produced on paper by striking an inked ribbon selectively against the paper with a type element. it was indeed the world's last producer of standard manual typewriters. In November 2012, Brother's UK factory manufactured what it claimed to be the last A typewriter is a mechanical or electromechanical machine for typing characters. Planned obsolescence tends to work best when a producer has at least an oligopoly. Before... 9c7d011ed3 Polaroid Corporation declared bankruptcy in 2001; its brand and assets were sold off. A successor Polaroid company formed, and the branded assets changed hands multiple times before being sold to Polish billionaire Wacław Smółkowski in 2017. This acquisition allowed Impossible Project, which had started producing instant films for older Polaroid cameras in 2008, to rebrand... 9c7d011ed3 Instead of the "basket" of individual typebars that swung up to strike the ribbon and page in a typical typewriter of the period, the Selectric had a chrome-plated plastic "element" (frequently called a "typeball", or less formally, a "golf ball") that rotated and tilted to the correct position before striking the paper. The element could be easily interchanged to use different fonts within the same document typed on the same typewriter, resurrecting a capability which had been pioneered by typewriters such as the Hammond and Blickensderfer in the late 19th century. 9c7d011ed3

Planned obsolescence expensive that they make the product uneconomic to repair. It is the deliberate shortening of the lifespan of a product to force people to purchase functional replacements. The rationale behind this strategy is to generate long-term sales volume by reducing the time between repeat purchases (referred to as "shortening the replacement cycle"). For example, Canon and some HP inkjet printers incorporate a replaceable print head which eventually In economics and industrial design, planned obsolescence (also called built-in obsolescence or premature obsolescence) is the concept of policies planning or designing a product with an artificially limited useful life or a purposely frail design, so that it becomes obsolete after a certain predetermined period of time upon which it decrementally functions or suddenly ceases to function, or might be perceived as unfashionable 9c7d011ed3
