Decision analysis While there may occasionally be justification for such methods in Decision analysis (DA) is the discipline comprising the philosophy, methodology, and professional practice necessary to address important decisions in a formal manner. Decision analysis includes many procedures, methods, and tools for identifying, clearly representing, and formally assessing important aspects of a decision; for prescribing a recommended course of action by applying the maximum expected-utility axiom to a well-formed representation of the decision; and for translating the formal representation of a decision and its

corresponding recommendation into insight for the decision maker, and other corporate and non-corporate stakeholders. analytic-hierarchy process for the representation of preferences or value judgments a731094929

54 a731094929 Harvard Professor Shuji Ogino writes: "'Science of science' (also called 'logology') is a broad discipline that investigates science. Its themes include the structure and relationships of scientific fields, rules and guidelines in science, education and training programs in science, policy and funding in science, history and future of science, and relationships of science with people and society." a731094929 79
a731094929

Wikipedia:Arbitration/Requests/Case/Manning

naming dispute/Workshop The workshop also includes a section (at the page-bottom) for analysis of the /Evidence, and for general discussion of the case. Proposals may include proposed general principles, findings of fact, remedies, and enforcement provisions, which are the four types of proposals that can be included in the final decision. Foundation-emphasised norms; where any and all means at an administrator's disposal, including page protection, to ensure that every Wikipedia article is in The purpose of the workshop is for the parties to the case, other interested members of the community, and members of the Arbitration Committee to post proposed components of the final decisions for review and comment

Sustainable innovation Journal of Cleaner
Production. 108: 808–817. It encourages
organisations to transition from linear
production models to restorative and
regenerative systems. and sustainability
requirements through the application of fuzzy
analytic hierarchy process

Bibcode:2015JCPro Environmental innovation, eco-innovation or sustainable innovation refers to innovation focused on the systematic development of new products, services, processes, or business models that significantly reduce environmental harm while creating economic and social value. Environmental sustainable innovation integrates environmental considerations into all stages of innovation, aligning with circular economy principles, green technologies, and clean production practices. It plays a crucial role in addressing climate change, biodiversity loss, and resource depletion while aligning economic growth with environmental protection and social well-being a731094929

John von Neumann He was a pioneer in
building the mathematical framework of

quantum physics, in the development of functional analysis, and in game theory, introducing or codifying concepts including cellular automata, the universal constructor and the digital computer. His analysis of the structure of self-replication preceded the discovery of the structure of DNA. middle-square method. He justified this crude method as faster than any other method at his disposal, writing that "Anyone who considers arithmetical methods of John von Neumann (von NOY-mən; Hungarian: Neumann János Lajos ['nɔjmøn 'ja:nɔf 'lɔjɔf]; December 28, 1903 – February 8, 1957) was a Hungarian and American mathematician, physicist, computer scientist and engineer. Von Neumann had perhaps the widest coverage of any mathematician of his time, integrating pure and applied sciences and making major contributions to many fields, including mathematics, physics, economics, computing, and statistics a731094929
