Lévy process All Lévy processes are additive processes. deterministic) Lévy processes have discontinuous paths. A Lévy process may thus be viewed as the continuous-time analog of a random walk. A Lévy process is a stochastic process $X = \{ X_t : t \geq 0 \}$ In probability theory, a Lévy process, named after the French mathematician Paul Lévy, is a stochastic process with independent, stationary increments: it represents the motion of a point whose successive displacements are random, in which displacements in pairwise disjoint time intervals are independent, and displacements in different time intervals of the same length have identical probability distributions 2615e15cc1

Criticism of Google Levine Criticism of Google includes concern for tax avoidance, misuse and manipulation of search results, its use of others' intellectual property, concerns that its compilation of data may violate people's privacy and collaboration with the US military on Google Earth to spy on users, censorship of search results and content, its cooperation with the Israeli military on Project Nimbus targeting Palestinians and the energy consumption of its servers as well as concerns over traditional business issues such as monopoly, restraint of trade, antitrust, patent infringement, indexing and presenting false information and propaganda in search results, and being an "Ideological Echo Chamber". Stochastic process Stochastic processes are widely used as mathematical models of systems and phenomena that appear to vary in a random manner. Furthermore, seemingly random changes in financial markets. In probability theory and related fields, a stochastic () or random process is a mathematical object usually defined as a family of random variables in a probability space, where the index of the family often has the interpretation of time. Stochastic processes have applications in many disciplines such as biology, chemistry, ecology, neuroscience, physics, image processing, signal processing, control theory, information theory, computer science, and telecommunications. Examples include the growth of a bacterial population, an electrical current fluctuating due to thermal noise, or the movement of a gas molecule.
