Chlamydia Most people who are infected have no symptoms. When symptoms do appear, they may occur only several weeks after infection; the incubation period between exposure and being able to infect others is thought to be on the order of two to six weeks. The infection can spread to the upper genital tract in women, causing pelvic inflammatory disease, which may result in future infertility or ectopic pregnancy.

Chlamydia can be spread during vaginal, anal, oral, or manual sex and can be passed from an infected mother to her baby during childbirth. Chlamydia, or more specifically a chlamydia infection, is a sexually transmitted infection caused by the bacterium *Chlamydia trachomatis*. Symptoms in men may include discharge from the penis, burning with urination, or pain and swelling of one or both testicles.
