Applications of artificial intelligence This article describes applications of. for its mobile application to streamline communication with customers. Artificial intelligence (AI) has been used in applications throughout industry and academia. Within the field of Artificial Intelligence, there are multiple subfields. A Google app analyzes language and converts speech into text. In recent years, there have been massive advancements in the field of Generative Artificial Intelligence, which uses generative models to produce text, images, videos or other forms of data. The platform can identify Artificial intelligence is the capability of computational systems to perform tasks typically associated with human intelligence, such as learning, reasoning, problem-solving, perception, and decision-making. The subfield of Machine learning has been used for various scientific and commercial purposes including language translation, image recognition, decision-making, credit scoring, and e-commerce

Space elevator Mobile base stations would have the advantage A space elevator, also referred to as a space bridge, star ladder, and orbital lift, is a proposed type of planet-to-space transportation system, often depicted in science fiction. An Earth-based space elevator would consist of a cable with one end attached to the surface near the equator and the other end attached to a counterweight in space beyond geostationary orbit (35,786 km altitude). the base station/anchor are typically mobile stations, large oceangoing vessels or other mobile platforms. The main component would be a cable (also called a tether) anchored to the surface and extending into space. The competing forces of gravity, which is stronger at the lower end, and the upward centrifugal pseudo-force (it is actually the inertia of the counterweight that creates the tension on the space side), which is stronger at the upper end, would result in the cable being held up, under tension, and

Diablo Immortal A mobile game in the Diablo series, it is set between the events of Diablo II and Diablo III. Players control a character of their chosen class: Barbarian, Wizard, Monk, Necromancer, Demon Hunter, Crusader, Blood Knight, Tempest or Druid; they must locate and destroy hidden shards of the Worldstone, to prevent Skarn, the Lord of Damnation, from destroying the world of Sanctuary. development team members stated that although they remained focused on mobile platforms, they were “not necessarily going to block” efforts by others to emulate Diablo Immortal is a free-to-play, massively multiplayer online action role-playing video game developed by Blizzard Entertainment and NetEase

Gun laying The term includes automated aiming using, for example, radar-derived target data and computer-controlled guns. It may be laying for either direct fire, where the gun is aimed directly at a target within the line-of-sight of the user, or by indirect fire, where the gun is not aimed directly at a target within the line-of-sight of the user. Indirect fire is determined from the information or data that is collected, calculated, and applied to physical coordinates to identify the location of the target by the user. The problem was that these calculations assumed what today is called an Gun laying is the process of aiming an artillery piece or turret, such as a gun, howitzer, or mortar, on land, at sea, or in air, against surface or aerial targets. elevation angle. This led to many calculations relating elevation angle to range

Elevator RTT calculations establish an elevator An elevator (American English, also in Canada) or lift (Commonwealth English except Canada) is a machine that vertically transports people or freight between levels. They are typically powered by electric motors that drive traction cables and counterweight systems such as a hoist, although some pump hydraulic fluid to raise a cylindrical piston like a jack. software to run the calculations. The GA formula was extended even further in 1996 to account for double deck elevators

Elevators are used in agriculture and manufacturing to lift materials. There are various types, like chain and bucket elevators, grain augers, and hay elevators.
