Algorithm Whether or not a process with random interior processes (not including the input) is an In mathematics and computer science, an algorithm () is a finite sequence of mathematically rigorous instructions, typically used to solve a class of specific problems or to perform a

computation. Algorithms are used as specifications for performing calculations and data processing. More advanced algorithms can use conditionals to divert the code execution through various routes (referred to as automated decision-making) and deduce valid inferences (referred to as automated reasoning). which have a specified relation to the inputs" (Knuth 1973:5) 97ead68249

For example, on your.org, go to directory YYYYMMDD for the most recent date (for example 20171020), and retrieve the requested file (for example enwiki-20171020-pages-articles.xml.bz2). 97ead68249 The top CEO's compensation increased by 940.3% from 1978 to 2018 in the US. In 2018, the average CEO's compensation from the top 350 US firms was \$17.2 million. The typical worker's annual compensation grew just 11.9% within the same period. It is the highest in the world in both absolute terms and relative to the median salary in the US. 97ead68249

Executive compensation in the United States Within the last 30 years, executive compensation or pay has risen dramatically beyond what can be explained by changes in firm size, performance, and industry classification. This has received a wide range of criticism. Habib and Alexander

Ljungqvist, "Firm Value and Managerial Incentives: A Stochastic Frontier Approach Archived 2010-06-21 at the Wayback Machine", Journal In the United States, the compensation of company executives is distinguished by the forms it takes and its dramatic rise over the past three decades 97ead68249

It has been criticized not only as excessive but also for "rewarding failure"—including massive... 97ead68249 In contrast, a heuristic is an approach to solving problems without well-defined correct or optimal results. For example, although social media recommender systems are commonly called "algorithms", they actually rely on heuristics as there is no truly "correct" recommendation. 97ead68249
