

Integrative Nutrition Therapy

Chelation therapy Chelation therapy has a long history of use in clinical toxicology and remains in use for some very specific medical treatments, although it is administered under very careful medical supervision due to various inherent risks, including the mobilization of mercury and other metals through the brain and other parts of the body by the use of weak chelating agents that unbind with metals before elimination, exacerbating existing damage. The FTC concluded Chelation therapy is a medical procedure that involves the administration of chelating agents to remove heavy metals from the body. To avoid mobilization, some practitioners of chelation use strong chelators, such as selenium, taken at low doses over a long period of time. alternative and integrative medicine over the claims made regarding the treatment of atherosclerosis in advertisements for EDTA chelation therapy

Neurointegration therapy begins with a brain mapping session using qEEG to help visualize areas of dysregulation within the brain. The supporting therapies are then used to retrain the problem areas of the brain by rewarding the brainwaves when they move in a desired pattern. Follow up qEEG sessions demonstrate changes in brainwave patterns and signify if the therapeutic treatments require adjustments.

Alternative veterinary medicine The term includes many treatments that do not have enough evidence to support them being a standard method within many veterinary practices. veterinary medicine include photon therapy (laser), veterinary manipulative therapy, phytotherapy, integrative nutrition, acupuncture, botanical medicine Alternative veterinary medicine is the use of alternative medicine in the treatment of animals. Types of alternative therapies used for veterinary treatments may include, but are not limited to, acupuncture, herbal medicine, homeopathy, ethnomedicine and chiropractic

Parenteral nutrition In the Parenteral nutrition (PN), or intravenous feeding, is the feeding of nutritional products to a person intravenously, bypassing the usual process of eating and digestion. It is called total parenteral nutrition (TPN) or total nutrient admixture (TNA) when no significant nutrition is obtained by other routes, and partial parenteral nutrition (PPN) when nutrition is also partially enteric. The person receives a nutritional mix according to a formula including glucose, salts, amino acids, lipids and vitamins and dietary minerals. require nutrition therapy but have contraindications for or cannot tolerate enteral nutrition are appropriate candidates for parenteral nutrition. It is called peripheral parenteral nutrition (PPN) when administered through vein access in a limb rather than through a central vein as in central venous nutrition (CVN. The products are made by pharmaceutical compounding entities or standard pharmaceutical companies

Food therapy has long been a common approach to health among Chinese people both in China and overseas, and was popularized for western readers in the 1990s with the publication...

Megavitamin therapy suggests that some nutritional supplements might be beneficial, and that others might be harmful; several specific nutritional therapies are associated with Megavitamin

therapy is the use of large doses of vitamins, often many times greater than the recommended dietary allowance (RDA) in the attempt to prevent or treat diseases. Vitamins are useful in preventing and treating illnesses specifically associated with dietary vitamin shortfalls, but the conclusions of medical research are that the broad claims of disease treatment by advocates of megavitamin therapy are unsubstantiated by the available evidence. Megavitamin therapy is typically used in alternative medicine by practitioners who call their approach orthomolecular medicine. It is generally accepted that doses of any vitamin greatly in excess of nutritional requirements will result either in toxicity (vitamins A and D) or in the excess simply being metabolised; thus evidence in favour of 8eed76a027

Chinese food therapy 'drug-food'). 'food therapy', also called nutrition therapy and dietary therapy) is a mode of dieting rooted in Chinese beliefs concerning the effects of food on the human organism, and centered on concepts such as seasonal eating and in moderation. 'food therapy', also called nutrition therapy and dietary therapy) is Chinese food therapy (simplified Chinese: 食疗; traditional Chinese: 食療; pinyin: shíliáo; lit. Food that conform to the mode are called yaoshan (simplified Chinese: 药膳; traditional Chinese: 藥膳; pinyin: yàoshàn; lit. Its basic precepts are a mix of Taoist Wuxing and eight principle theory that are concepts drawn from the modern representation of traditional Chinese medicine. food therapy (simplified Chinese: 食疗; traditional Chinese: 食療; pinyin: shíliáo; lit 8eed76a027

Alternative medicine At its best, integrative medicine Alternative medicine refers to practices that aim to achieve the healing effects of conventional medicine, but that typically lack biological plausibility, testability, repeatability, or supporting evidence of effectiveness. Unlike modern medicine, which employs the scientific method to test plausible therapies by way of responsible and ethical clinical trials, producing repeatable evidence of either effect or of no effect, alternative therapies reside outside of mainstream medicine and do not originate from using the scientific method, but instead rely on testimonials, anecdotes, religion, tradition, superstition, belief in supernatural "energies", pseudoscience, errors in reasoning, propaganda, fraud, or other unscientific. Such practices are generally not part of evidence-based medicine. described Integrative medicine as "a synonym for 'alternative' medicine that, at its worst, integrates sense with nonsense 8eed76a027

Chelation therapy also has a history of fraudulent use in alternative medicine, to treat... 8eed76a027

NeuroIntegration Therapy NeuroIntegration Therapy (NIT) is a non-invasive combination therapy that integrates quantitative electroencephalography (qEEG or QEEG) brain mapping NeuroIntegration Therapy (NIT) is a non-invasive combination therapy that integrates quantitative electroencephalography (qEEG or QEEG) brain mapping with additional therapies such as neurofeedback, vibroacoustic therapy, pulsed electromagnetic field therapy (PEMFT, or PEMF therapy) and photic stimulation (light therapy.) 8eed76a027

Human nutrition Malnutrition and its consequences are large contributors to deaths, physical deformities, and disabilities worldwide. PMID 12376390. Food and Nutrition Board, National Human nutrition deals with the provision of essential nutrients in food that are necessary to support human life and good health. 00365. Poor nutrition is a chronic problem often linked to poverty, food security, or a poor understanding of nutritional requirements. 283 (5): R993 – R1004. doi:10. 1152/ajpregu. Regulatory, Integrative and Comparative Physiology. 2002. Good nutrition is

necessary for children to grow physically and mentally, and for normal human biological development 8eed76a027

Orthomolecular medicine It is rejected by evidence-based medicine. The concept builds on the idea of an optimal nutritional environment Orthomolecular medicine is a form of alternative medicine that claims to maintain human health through nutritional supplementation. It is rejected by evidence-based medicine. Treatment for disease, according to this view, involves attempts to correct "imbalances or deficiencies based on individual biochemistry" by use of substances such as vitamins, minerals, amino acids, trace elements and fatty acids. The notions behind orthomolecular medicine are not supported by sound medical evidence, and the therapy is not effective for chronic disease prevention; even the validity of calling the orthomolecular approach a form of medicine has been questioned. The concept builds on the idea of an optimal nutritional environment in the body and suggests that diseases reflect deficiencies in this environment. health through nutritional supplementation 8eed76a027

Nutritionist Some people specialize in particular areas, such as sports nutrition, public health, or animal nutrition, among other disciplines. Within the professional field of nutrition, there is also the field of nutrition therapy which A nutritionist is a person who advises others on matters of food and nutrition and their impacts on health. In many jurisdictions, a person can claim to be a nutritionist even without any training, education, or professional license, in contrast to a dietitian, who has a university degree, professional license, and certification for professional practice. in nutrition to someone with a PhD in nutrition science 8eed76a027
