Apophyllite The name apophyllite is derived from the Greek *apophyllizo* (ἀποφυλλίζω), meaning 'it flakes off', a reference to this class's tendency to flake apart when heated, due to water loss. Originally, the group name referred to a specific mineral, but was redefined in 1978 to stand for a class of minerals of similar chemical makeup that comprise a solid solution series, and includes the members fluorapophyllite-(K), fluorapophyllite-(Na), hydroxyapophyllite-(K). A recent change (2008) in the nomenclature system used. These minerals are typically found as secondary minerals in vesicles in basalt or other volcanic rocks. for a class of minerals of similar chemical makeup that comprise a solid solution series, and includes the members fluorapophyllite-(K), fluorapophyllite-(Na) The name apophyllite refers to a specific group of phyllosilicates, a class of minerals. Exfoliation of apophyllite is also possible by treating it with acids or simply by rubbing it ffa3e32217

Solved game Games A solved game is a game whose outcome (win, lose or draw) can be correctly predicted from any position, assuming that both players play perfectly. This concept is usually applied to abstract strategy games, and especially to games with full information and no element of chance; solving such a game may use combinatorial game theory or computer assistance. example of a strong solution, the game of tic-tac-toe is easily solvable as a draw for both players with perfect play (a result manually determinable) ffa3e32217
