Captain Hernán Cortés of the Spanish decided to launch a massive assault onto the city to take the market of Tlatelolco. The Spanish faced a much stronger resistance than expected and were eventually forced to retreat, suffering their worst losses since La Noche... a7cc18fe31 208896 a7cc18fe31 cat:WP:Chemistry articles by quality (deep 2); set list from talkpage to subject page a7cc18fe31 19 a7cc18fe31

Round-robin test This can involve multiple independent scientists performing the test with the use of the same method in different equipment, or a variety of methods and equipment. standards. The IFA organises the proficiency testing schemes in co-operation In experimental methodology, a round-robin test is an interlaboratory test (measurement, analysis, or experiment) performed independently several times. In reality it is often a combination of the two, for example if a sample is analysed, or one (or more) of its properties is measured by different laboratories using different methods, or even just by different units of equipment of identical construction. The PT schemes are conducted according to DIN EN ISO/IEC 17043 and DIN ISO 13528 a7cc18fe31
