

The Flow Modern Man

Scotland in the modern era Scotland in the modern era, from the end of the Jacobite risings and beginnings of industrialisation in the 18th century to the present day, has played Scotland in the modern era, from the end of the Jacobite risings and beginnings of industrialisation in the 18th century to the present day, has played a major part in the economic, military and political history of the United Kingdom, British Empire and Europe, while recurring issues over the status of Scotland, its status and identity have dominated political debate 54d7f973f3

List of video games in the Museum of Modern Art These games were chosen by the Museum of Modern Art in order to showcase design elements within them. Games A number of video games were selected by the Museum of Modern Art, located in New York City, as part of its permanent collection. taken cautious care of traffic flow within the exhibit, placing games that are likely to be heavily played (such as Pac-Man) near entrances and exits. Six more games were added to the collection in June 2013, as well as a game console. Fourteen initial games were announced in November 2012, with plans to expand the collection to up to forty games over time, as the museum is able to acquire the display rights for them 54d7f973f3

Solo Man It is known from 14 skullcaps, two tibiae, and a piece of the pelvis excavated near the village of Ngandong, and possibly three skulls from Sambungmacan and a skull from Ngawi depending on classification. This population is the last known record of the species. Australians; however, Solo Man is now thought to have no living descendants as the remains far predate modern human immigration into the area, which began roughly Solo Man (*Homo erectus soloensis*) is a subspecies of *H. erectus* subspecies were. The Ngandong site was first excavated from 1931 to 1933 under the direction of Willem Frederik Florus Oppenoorth, Carel ter Haar, and Gustav Heinrich Ralph von Koenigswald, but further study was set back by the Great Depression, World War II and the Indonesian War of Independence. In accordance with historical race concepts, Indonesian *H. erectus* that lived along the Solo River in Java, Indonesia, about 117,000 to 108,000 years ago in the Late Pleistocene 54d7f973f3

Led by Eugène Dubois, the excavation team uncovered a tooth, a skullcap, and a thighbone at Trinil on the banks of the Solo River in East Java. Arguing that the fossils represented the "missing link" between apes and humans, Dubois gave the species the scientific name *Anthropopithecus erectus*, then later renamed it *Pithecanthropus erectus*. The fossil aroused much controversy. Within a decade of the discovery almost eighty books... 54d7f973f3 In Europe, Asia and North Africa, interbreeding between archaic humans and modern humans took place several times. The introgression events into modern humans are estimated to have happened about 47,000–65,000 years ago with Neanderthals and about 44,000–54,000 years ago with Denisovans. 54d7f973f3

River Rivers are regulated by the water cycle, the processes by which water moves around the Earth. A river may run dry before reaching the end of its course if it runs out of water, or only flow during certain seasons. before reaching the end of its course if it runs out of water, or only flow during certain seasons. Rivers are regulated by the water cycle, the processes by A river is a natural stream of fresh water that flows on land or inside caves driven towards another body of water at a lower elevation by gravity, such as an ocean, lake, or another river. Water first enters rivers through precipitation, whether from rainfall, the runoff of water down a slope, the melting of glaciers or snow, or seepage from aquifers beneath the surface of the Earth 54d7f973f3

Java Man Estimated to be between 700,000 and 1,490,000 years old, it was, at the time of its discovery, the oldest hominid fossil ever found, and it remains the type specimen for *Homo erectus*. scientists considered Java Man as a primitive side branch of evolution not related to modern humans at all. In the 1930s Dubois made the claim that *Pithecanthropus Java Man* (*Homo erectus erectus*, formerly also *Anthropopithecus erectus* or *Pithecanthropus erectus*) is an early human fossil discovered in 1891 and 1892 on the island of Java (Indonesia) 54d7f973f3

Early modern human This distinction is useful especially for times and regions where anatomically modern and archaic humans co-existed, for example, in Paleolithic Europe. Among the oldest known remains of *Homo sapiens* are those found at the Omo-Kibish I archaeological site in south-western Ethiopia, dating to about 233,000 to 196,000 years ago, the Florisbad Skull founded at the Florisbad archaeological and paleontological site in South Africa, dating to about 259,000 years ago, and the Jebel Irhoud site in Morocco, dated about 350,000 years ago. Early modern human (EMH), or anatomically modern human (AMH), are terms used to distinguish *Homo sapiens* (the only extant Hominina species) that are anatomically Early modern human (EMH), or anatomically modern human (AMH), are terms used to distinguish *Homo sapiens* (the only extant Hominina species) that are anatomically consistent with the range of phenotypes seen in contemporary humans, from extinct archaic human species 54d7f973f3

The Journey of Man The book was made into a TV documentary in 2003. for the female lineage Human Y-chromosome DNA haplogroup for the male lineage Mitochondrial Eve Recent African origin of modern humans "Journey of Man (TV The Journey of Man: A Genetic Odyssey is a 2002 book by Spencer Wells, an American geneticist and anthropologist, in which he uses techniques and theories of genetics and evolutionary biology to trace the geographical dispersal of early human migrations out of Africa 54d7f973f3

Neanderthal-derived DNA has been found in the genomes of most contemporary populations, varying noticeably by region. It accounts for 1–4% of modern genomes for people outside Sub-Saharan Africa, although estimates vary, and either none or up to 0.3% for... 54d7f973f3

Even Flow Featuring lyrics written by vocalist Eddie Vedder and music written by guitarist Stone Gossard, it was released in 1992 as the second single from the band's debut album, *Ten* (1991). A remixed version of the song was included on the 2009 *Ten* reissue. The song peaked at number three on the Billboard Mainstream Rock Tracks chart. "Even Flow" is a song by the American rock band, Pearl

Jam. The song was included in Pearl Jam's 2004 greatest hits album, *Rearviewmirror* (Greatest Hits 1991–2003). Featuring lyrics written by vocalist Eddie Vedder and music written by guitarist Stone Gossard "Even Flow" is a song by the American rock band, Pearl Jam 54d7f973f3

Gene flow Migrants change the distribution of genetic diversity among populations, by modifying allele frequencies (the proportion of members carrying a particular variant. It has been shown that it takes only "one migrant per generation" to prevent populations from diverging due to drift. If the rate of gene flow is high enough, then two populations will have equivalent allele frequencies and therefore can be considered a single effective population. Gene flow is an important mechanism for transferring genetic diversity among populations. gene flow (also known as migration and allele flow) is the transfer of genetic material from one population to another. Populations can diverge due to selection even when they are exchanging alleles, if the selection pressure is strong enough. If the rate of gene flow is high In population genetics, gene flow (also known as migration and allele flow) is the transfer of genetic material from one population to another 54d7f973f3

Rivers flow in channeled watercourses and merge in confluences to form drainage basins, areas where surface water eventually flows to a common outlet. Drainage divides keep rivers separated from other... 54d7f973f3 Scotland made a major contribution to the intellectual life of Europe, particularly in the Enlightenment, producing major figures including the economist Adam Smith, philosophers Francis Hutcheson and David Hume, and scientists William Cullen, Joseph Black and James Hutton. In the 19th century major figures included James Watt, James Clerk Maxwell, Lord Kelvin and Sir Walter Scott. Scotland's economic contribution to the Empire... 54d7f973f3

Interbreeding between archaic and modern humans According to the authors the observed excess of genetic similarity is best explained by recent gene flow from Neanderthals to modern humans after the migration Interbreeding between archaic and modern humans occurred during the Middle Paleolithic and early Upper Paleolithic. The interbreeding happened in several independent events that included Neanderthals and Denisovans, as well as several unidentified hominins 54d7f973f3

Curated by Paola Antonelli, the collection was included in the exhibition *Applied Design* in the Philip Johnson Architecture and Design Galleries. In these galleries, around a hundred objects that represent contemporary design were displayed. Most games in the collection are playable on some level... 54d7f973f3
