Oral cancer Marx RE, Stern D (2003). Chicago: Quintessence Oral cancer, also known as oral cavity cancer, tongue cancer or mouth cancer, is a cancer of the lining of the lips, mouth, or upper throat. In the mouth, it most commonly starts as a painless red or white patch, that thickens, gets ulcerated and continues to grow. Other symptoms may include difficult or painful swallowing, new lumps or bumps in the neck, a swelling in the mouth, or a feeling of numbness in the mouth or lips. When on the lips, it commonly looks like a persistent crusting ulcer that does not heal, and slowly grows. Stern, Diane. OCLC 316431417. Oral and maxillofacial pathology : a rationale for diagnosis and treatment 020095724f

The faculty is under the dual supervision of the Ministry of Higher Education and Scientific Research and the Ministry of Public Health. 020095724f

Hypersalivation sialorrhea Citing: The American Heritage Dictionary of the English Language, Fourth Edition, Updated in 2009. Merriam-Webster's Medical Desk Hypersalivation or hypersialosis is the excessive production of saliva. It has also been defined as increased amount of saliva in the mouth, which may also be caused by decreased clearance of

saliva. "hypersalivation" 020095724f

The bone is named for Atlas of Greek mythology, just as Atlas bore the weight of the heavens, the first cervical vertebra supports the head. However, the term atlas was first used by the ancient Romans for the seventh cervical vertebra (C7) due to its suitability for supporting burdens. In Greek mythology, Atlas was condemned to bear the weight of the heavens as punishment for rebelling against Zeus. Ancient depictions of Atlas show the globe of the heavens resting at the base of his neck, on C7. Sometime around 1522, anatomists decided to call the first cervical vertebra the atlas. Scholars believe that by switching the designation atlas from the seventh to the first cervical... 020095724f

Atlas (anatomy) mental foramen: an anatomical study on dry mandibles and review of the literature". 1007/s10006-014-0474-1 In anatomy, the atlas (C1) is the most superior (first) cervical vertebra of the spine and is located in the neck. Oral and Maxillofacial Surgery. doi:10. 19 (2): 177-181 020095724f

Cemento-osseous dysplasia 2012. It is most common in middle-aged females of African descent. Florid COD is an extensive variant of periapical COD where lesions occur in multiple quadrants which can encompass the maxilla and mandible, and infrequently can cause jawbone deformity. Kahn, Michael A. The three types are periapical cemental dysplasia (common in those of African descent), focal cemento-osseous dysplasia (Caucasians), and florid cemento-osseous dysplasia (African descent). Volume 1. Neville and Damm. Basic Oral and Maxillofacial Pathology. Oral and Maxillofacial Pathology, 3rd Edition. Periapical COD occurs most commonly in the mandibular anterior teeth while focal COD appears predominantly in the mandibular posterior teeth. v t e Cemento-osseous dysplasia (COD) is a benign condition of the jaws that may arise from the fibroblasts of the periodontal ligaments. 2001 020095724f

Maxilla The two maxillary bones are fused at the intermaxillary suture, forming the anterior nasal spine. The mandible is the movable part of the jaw. to Maxilla. Maxillofacial surgery Maxillary crest This article incorporates text in the public domain from page 157 of the 20th edition of Gray's Anatomy In vertebrates, the maxilla (pl. : maxillae) is the upper fixed (not fixed in Neopterygii) bone of the jaw formed from the fusion of two maxillary bones. In humans, the upper jaw includes the hard palate in the front of the mouth. This is similar to the mandible (lower jaw), which is also a fusion of two mandibular bones at the mandibular symphysis 020095724f

Risk factors include tobacco and alcohol use. Those who use both alcohol and tobacco have a 15 times greater risk of oral cancer than those who use neither. Other risk factors include betel nut chewing and sun exposure on the lip. HPV infection may play a limited... 020095724f Hypersalivation can contribute to drooling if there is an inability to keep the

mouth closed or difficulty in swallowing (dysphagia) the excess saliva, which can lead to excessive spitting. 020095724f

Iliac crest For example, oral and maxillofacial surgeons will often use iliac crest bone to fill in large osseous defects of the oral cavity caused by severe The crest of the ilium (or iliac crest) is the superior border of the wing of ilium and the superolateral margin of the greater pelvis. needed 020095724f

Cleft lip and cleft palate These disorders can result in feeding problems, speech problems, hearing problems, and frequent ear infections. A cleft palate occurs when the palate (the roof of the mouth) contains an opening into the nose. (October 2008). 66 (10): 1985–1995. The opening may be on one side, both sides, or in the middle. Less than half the time the condition is associated with other disorders. The term orofacial cleft refers to either condition or to both occurring together. Journal of Oral and Maxillofacial Surgery. "Fetal diagnosis and treatment of craniomaxillofacial anomalies". doi:10 A cleft lip contains an opening in the upper lip that may extend into the nose 020095724f

Cleft lip and palate are the result of tissues of the face not joining properly during development. As such, they are a type of birth defect. The cause is unknown in most cases. Risk factors include smoking during pregnancy, diabetes, obesity, an older mother, and certain medications (such as... 020095724f

Cheilitis ISBN 9781481662260. Neville BW, Damm DD, Allen CA, Bouquot JE (2002). ScholarlyEditions. The inflammation may include the perioral skin (the skin around the mouth), the vermilion border, or the labial mucosa. The skin and the vermilion border are more commonly involved, as the mucosa is less affected by inflammatory and allergic reactions. Oral & maxillofacial pathology Cheilitis also called and known as chapped lips, is a medical condition characterized by inflammation of the lips. Professional: 2013 Edition: ScholarlyBrief 020095724f

Cheilitis is a general term, and there are many recognized types and different causes. According to its onset and course, cheilitis can be either acute or chronic. Most cheilitis is caused by exogenous factors such as dryness (chapping) and acute sun exposure. Allergic tests may identify allergens that cause cheilitis. 020095724f

Faculty of Dental Medicine of Monastir It is the first school to be established within the University of Monastir, and it is the only institution for dental studies in the country. departement of stomatology and two months in another hospital department (cardiology, ENT, infectious diseases, Oral and maxillofacial surgery or internal medicine); The Faculty of Dental Medicine of Monastir (FMDM) (Arabic: الكلية الطبية الاسنان بمناستير) is a dental school in Monastir, Tunisia 020095724f

While these tumors are rarely malignant or metastatic (that is, they rarely spread to other parts of the body), and progress slowly, the resulting lesions can cause severe abnormalities of the face and jaw leading to severe disfiguration. Additionally, as abnormal cell growth easily infiltrates and destroys surrounding bony tissues, wide surgical...
