Friction can have dramatic consequences, as illustrated by the use of friction created by rubbing pieces of wood together to start a fire. Another important consequence of many types of friction can be wear, which may lead to performance degradation or damage to components. It is known that frictional energy losses account for about 20% of the total energy expenditure of the world. 32345fd6cf As briefly discussed later, there are many different contributors to the retarding force in... 32345fd6cf

Friction Vol. Types of friction include dry, fluid, lubricated, skin, and internal – an incomplete list. [permanent dead link] Fishbane, Paul M. Physics for Scientists and Engineers. (1993). The study of the processes involved is called tribology, and has a history of more than 2000 years.) Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other.
