Tel Aviv-Jerusalem railway In spite of that name, the line is not high-speed under the definition used by the International Union of Railways: both its design speed of 200 km/h (125 mph) and its current operational speed of 160 km/h (99 mph) are below the 250 km/h (155 mph) threshold used by the UIC to define high-speed railways, and it is traversed by IR's regular rolling stock instead of the UIC requirement for specially designed high-speed trains. The line serves as the main rail link between the two cities, complementing the old Jaffa-Jerusalem railway. extensive bridging and tunneling required along the mountainous route. As such, the railway is often referred to in Israel as the high-speed railway to Jerusalem to distinguish it from the older, longer and slower line. Ellis' British Railway Engineering Encyclopaedia (3rd Revised ed. A pipeline differs significantly from a tunnel, though some recent tunnels have used immersed tube construction techniques rather than traditional tunnel boring methods. Lulu a9942f7603

The tube would be placed underwater, deep enough to avoid water traffic and weather, but not so deep that high water pressure needs to be dealt with; usually a depth of 20 to 50 m (66 to 164 ft) is sufficient. Cables either anchored to the seabed or to pontoons on the surface would prevent it from floating to the surface or submerging, respectively. a9942f7603
