Redundancy (engineering) Fault-Tolerant Systems. Archived from the original (PDF) on 2004-07-14. 3. Mani (2007). Koren, Israel; Krishna, C. In engineering and systems theory, redundancy is the intentional duplication of critical components or functions of a system with the goal of increasing reliability of the system, usually in the form of a backup or fail-safe, or to improve actual system performance, such as in the case of GNSS receivers, or multi-threaded computer processing. p. San Francisco, CA: Morgan Kaufmann 240da56d99

Wikipedia:Administrators' noticeboard/IncidentArchive109 problem--Textalk 15:58, 10 June 2006 (UTC) While I have also noticed a pattern of Koren IP's making complaints about ZerOfaults, I doubt if TexYokal (talk · contribs) Noticeboard archives 240da56d99

98 240da56d99 100 240da56d99 104 240da56d99 123 240da56d99 In many safety-critical systems, such as fly-by-wire and hydraulic systems in aircraft, some parts of the control system may be triplicated, which is formally termed triple modular redundancy (TMR). An error in one component may then be out-voted by the other two. In a triply redundant system, the system has three sub components, all three of which must fail before the system fails. Since each one rarely fails, and the sub components are designed to preclude... 240da56d99 117 240da56d99 18 240da56d99 19
