Jessie Murray was an interesting person. She founded one of the first psychotherapeutic consultancies in Britain and helped train a generation of analysts in what was a nascent field of study. History has slightly overlooked her achievements partly through misogyny and partly through psycho-politics of Freudians versus anyone who wasn't a devotee of Freud. Abiogenesis The transition from non-life to life has not been observed experimentally, but many proposals have been made for different stages of the process. biosphere - Hypothetical biosphere of Earth Manganese metallic nodules The reactions are: $\text{FeS} + \text{H}_2\text{S} \rightarrow \text{FeS}_2 + 2\text{H}^+ + 2\text{e}^-$ $\text{FeS} + \text{H}_2\text{S} + \text{CO}_2 \rightarrow \text{FeS}_2 + \text{HCOOH}$ The Abiogenesis is the natural process by which life arises from non-living matter, such as simple organic compounds. The prevailing scientific hypothesis is that the transition from non-living to living entities on Earth was not a single

event, but a process of increasing complexity involving the formation of a habitable planet, the prebiotic synthesis of organic molecules, molecular self-replication, self-assembly, autocatalysis, and the emergence of cell membranes e1e2368633

Air is the most common and only natural breathing gas, but other mixtures of gases, or pure oxygen, are also used in breathing equipment and enclosed habitats. Oxygen is the essential component for any breathing gas. CRC Press. Breathing gases for hyperbaric use have been developed to improve on the performance of ordinary air by reducing the risk of decompression sickness, reducing the duration of decompression, reducing nitrogen narcosis or reducing work of breathing and allowing safer deep diving. It can also be given through bypassing the airway, such as in ECMO therapy. Lippincott Oxygen therapy, also referred to as supplemental oxygen, is the use of oxygen as medical treatment. Dart RC (2004). Acute indications for therapy include hypoxemia (low blood oxygen levels), carbon monoxide toxicity and cluster headache. Archived from the original on 2017-01-18. It is an allotrope of oxygen that is much less stable than the diatomic allotrope O₂, breaking down in the lower atmosphere to O₂ (dioxygen). Ozone is formed from dioxygen by the action of ultraviolet (UV) light and electrical discharges within the Earth's atmosphere.
