Hua Luogeng or Hua Loo-Keng (Chinese: 华罗庚; Wade-Giles: Hua Lo-keng; 12 November 1910 – 12 June 1985) was a Chinese mathematician and politician famous for his contributions to number theory and for his role as the leader of mathematics research and education in the People's Republic of China. He was elected a foreign associate of the US National Academy of Sciences in 1982. Hua's later work on mathematical optimization and operations research made an enormous impact on China's economy.

Critical thinking Review of Educational Critical thinking is the process of analyzing available facts, evidence, observations, and arguments to make sound conclusions or informed choices. It involves recognizing underlying assumptions, providing justifications for ideas and actions, evaluating these justifications through comparisons with varying perspectives, and assessing their rationality and potential consequences. In modern times, the use of the phrase critical thinking can be traced to John Dewey, who used the phrase reflective thinking, which depends on the knowledge base of an individual; the excellence of critical thinking in which an individual can engage varies according to it. The goal of critical thinking is to form a judgment through the application of rational, skeptical, and unbiased analyses and evaluation. Anne; Persson, Tonje (2015). "Strategies for Teaching Students to Think Critically: A Meta-Analysis". Waddington, David I. ; Wade, C. According

The name may be used to refer specifically to a length of stone course just over 1 mile (1.6 km) long on Wheeldale Moor and protected as a scheduled monument. It may be also be applied more broadly to include an additional postulated extension of this structure, two sections of which are also scheduled monuments, and which extend to the north and south of Wheeldale for up to 25 miles (40 km). Genetics Freeman. "Genetics and the Organism: Introduction". ISBN 978-0-7167-3520-5 Genetics is the study of genes, genetic variation, and heredity in organisms. H. (2000). Gregor Mendel, a Moravian Augustinian friar working in the 19th century in Brno, was the first to study genetics scientifically. An Introduction to Genetic Analysis (7th ed. It is an important branch in biology because heredity is vital to organisms' evolution. He observed that organisms (pea plants) inherit traits by way of discrete "units of inheritance". This term, still used today, is a somewhat

ambiguous definition of what is referred to as a gene. Gelbart, eds. New York: W. Mendel studied "trait inheritance", patterns in the way traits are handed down from parents to offspring over time

Roe v. Wade S. S. 113 (1973), was a landmark decision of the U. Supreme Court in which the Court ruled that the Constitution of the United States Roe v. 113 (1973), was a landmark decision of the U. S. The decision also shaped debate concerning which methods the Supreme Court should use in constitutional adjudication. The decision struck down many State abortion laws, and it sparked an ongoing abortion debate in the United States about whether, or to what extent, abortion should be legal, who should decide the legality of abortion, and what the role of moral and religious views in the political sphere should be.
