

Digital Design Principles And Practices Package John F Wakerly

current-mode logic (CML) 3910d76c60

Emitter-coupled logic ECL uses a bipolar junction transistor (BJT) differential amplifier with single-ended input and limited emitter current to avoid the saturated (fully on) region of operation and the resulting slow turn-off behavior. Blood Jr. Wakerly. Section "ECL: Emitter-Coupled Logic"; 3 John F. (for the day) 150W. Sedra; In electronics, emitter-coupled logic (ECL) is a high-speed integrated circuit bipolar transistor logic family. 1972, p. Supplement to Digital Design Principles and Practices 3910d76c60

As the current is steered between two legs of an emitter-coupled pair, ECL is sometimes called current-steering logic (CSL), 3910d76c60 or current-switch emitter-follower (CSEF) logic. 3910d76c60 In ECL, the transistors are never in saturation, the input and output voltages have a small swing (0.8 V), the input impedance is high and the output impedance is low. As a result, the transistors change states quickly, gate delays are low, and the fanout capability is high... 3910d76c60
