

Mitsubishi 4g63 Engine Wiring Diagram

Wasted spark system In a wasted spark system, the spark plugs fire in pairs, with one plug in a cylinder on its compression stroke and the other plug in a cylinder on its exhaust stroke. In a typical engine, it requires only about 2-3 kV to fire the cylinder on its exhaust stroke. The extra spark during the exhaust stroke has no effect and is thus "wasted". The remaining coil energy is available to fire the spark plug in the cylinder on its compression stroke (typically about 8 to 12 kV). been widely used, including such engines as the MG MG6 1. 8T engine; Mitsubishi Evolution 4G63 engine, Fiat 126 engine, Mercedes-Benz inline sixes (M104 A wasted spark system is a type of ignition system used in some four-stroke cycle internal combustion engines. This design halves the number of components necessary in a typical ignition system, while the extra spark, against much reduced dielectric resistance, barely impacts the lifespan of modern ignition components c6db7afe82
