Shark finning The sharks are often still alive when discarded, but without their fins. Many

countries have banned the practice or require the whole shark to be brought back to port before the removal of its fins. Shark finning at sea enables fishing vessels to increase profitability and increase the number of sharks harvested, as they must only store and transport the fins, by far the most profitable part of the shark; the shark meat is bulky to transport. Unable to swim effectively, they sink to the bottom of the ocean and die of suffocation or are eaten by other predators. American chef Ken Hom sees the West doing little to protect stocks of cod and caviar-producing sturgeon despite the outcry over shark-finning, but he also stresses Shark finning is the act of removing fins from sharks and discarding the rest of the shark back into the ocean e5150f528e
