Designed by an R&D team supervised by Hideki Sato and Masami Ishikawa, the Genesis was adapted from Sega's System 16 arcade board, centered on a Motorola 68000 processor as the CPU, a Zilog Z80 as a sound controller, and a video system supporting hardware... Organizational culture influences how people interact, how decisions are made (or avoided), the context within which cultural artifacts are created, employee attachment, the organization's competitive advantage, and the internal alignment of its units. It is distinct from national culture or the broader cultural background of its workforce....

History of underwater diving Military diving also has a long history, going back at least as far as the Peloponnesian War, with recreational and sporting applications being a recent development. By the end of the nineteenth century, two basic templates for scuba, (self-contained underwater breathing apparatus), had emerged: open-circuit scuba The history of underwater diving starts with freediving as a widespread means of hunting and gathering, both for food and other valuable resources such as pearls and coral. By classical Greek and Roman times commercial applications such as sponge diving and marine salvage were established. pressures. In the 16th and 17th centuries diving bells became functionally useful when a renewable supply of air could be provided to the diver at depth, and progressed to surface-supplied diving helmets—in effect miniature diving bells covering. Technological development in ambient pressure diving started with stone weights (skandalopetra) for fast descent

Gas cylinder). Gas storage cylinders may also be called bottles. Pretoria, South Africa: Standards South Africa A gas cylinder is a pressure vessel for storage and containment of gases at above atmospheric pressure. Inside the cylinder the stored contents may be in a state of compressed gas, vapor over liquid, supercritical fluid, or dissolved in a substrate material, depending on the physical characteristics of the contents. for compressed, dissolved and liquefied gases – Basic design, manufacture, use and maintenance (9th ed. A typical gas cylinder design is elongated, standing upright on a flattened or dished bottom end or foot ring, with the cylinder valve screwed into the internal neck thread at the top for connecting to the filling or receiving apparatus

Breathing gas Diving using mixed A breathing gas is a mixture of gaseous chemical elements and compounds used for respiration. Breathing gases for hyperbaric use have been developed to improve on the performance of ordinary air by reducing the risk of decompression sickness, reducing the duration of decompression, reducing nitrogen narcosis or reducing work of

breathing and allowing safer deep diving. the composition required before the dive, for open circuit use, or produced in the breathing circuit of a rebreather during the dive. Oxygen is the essential component for any breathing gas. Air is the most common and only natural breathing gas, but other mixtures of gases, or pure oxygen, are also used in breathing equipment and enclosed habitats 5e5ebfa3f9
