finch species compete for the same medium-sized seed-eating niche, perhaps one will evolve to take advantage of larger seeds, reducing the overlap of niches (and thus the competitive pressure)

Biology: Community Ecology - Biology: Community Ecology 12 minutes, 39 seconds - Welcome to section 3.1 now in 3.1 we're going to focus on **community ecology**, now if you guys remember this idea of community ...

Chemical defenses include odors and toxins • Aposematic coloration (Conspicuous markings) is indicated by warning color, and is sometimes associated with other defenses (toxins).

Introduction

These great trees also shade the water, keeping them cool, and redwoods fall into streams, creating calm, deep pools where fish take refuge from predators and fast currents In turn, salmon supply redwoods and other plants with nutrients from their bodies after they spawn and die in the stream

Interspecies Interactions

Primary Succession

The competitive exclusion principle: two species with similar needs for same limiting resources cannot coexist in the same place.

The ecological niche is the sum total of an organism's use of
abiotic/biotic resources in the environment. - its role in the
environment The competitive exclusion principle can be re say that
two species cannot coexist in a commu their niches are identical. - A
realized niche is the space an organism actu occupies, usually a
smaller portion of the fundamental niche for which it is best adapted.
