

Useful Information On Psoriasis

Urea-containing cream condition with hyperkeratosis where urea cream is useful include: Dry skin and rough skin Dermatitis Psoriasis Ichthyosis Eczema Keratosis Keratoderma Corns Urea, also known as carbamide-containing cream, is used as a medication and applied to the skin to treat dryness and itching such as may occur in psoriasis, dermatitis, or ichthyosis. It may also be used to soften nails

In... 89ff74cea8 One handprint is 0.8% (i.e. approximately 1%) of the total body surface area, and one FTU covers approximately two handprints. As two FTUs are approximately equivalent to 1g of topical application, the "Rule of Hand" states that "4 hand areas = 2

FTU = 1 g". 89ff74cea8 In adults side effects are generally few. It may occasionally cause skin irritation. Urea works in part by loosening dried skin. Preparations generally contain 5 to 50% urea. 89ff74cea8

Clocortolone Phase III trials also showed rapid action and Clocortolone (Cloderm) is a topical steroid. III trials, Cloderm was found to be especially useful in treating eczema, atopic dermatitis, and psoriasis. It is used in the form of an ester, clocortolone pivalate, and applied as a cream. It is unusual among steroids in that it contains a chlorine atom and a fluorine atom. It is used for the treatment of dermatitis and is considered a medium-strength corticosteroid 89ff74cea8

Urea containing creams have been used since the 1940s. It is on the World Health Organization's List of Essential Medicines. It is available over the counter. 89ff74cea8

Levobunolol effects on the heart and circulatory system, breathing problems in people with asthma, and skin symptoms such as itching and aggravation of psoriasis. It is used topically in the form of eye drops to manage ocular hypertension (high pressure in the eye) and open-angle glaucoma. Even Levobunolol (trade names AKBeta, Betagan, Vistagan, among others) is a non-selective beta blocker

Finger tip unit European Guidelines for the In medicine, a finger tip unit (FTU) is defined as the amount of ointment, cream or other semi-solid dosage form expressed from a tube with a 5 mm diameter nozzle, applied from the distal skin-crease to the tip of the index finger of an adult. Two FTUs are approximately equivalent to 1 g of topical steroid. a "handprint". The "distal skin-crease" is the skin crease over the joint nearest the end of the finger. guidelines of care for the management of psoriasis with topical therapies include guidance of amount to be used based on the FTU. One FTU is enough to treat an area of skin twice the size of the flat of an adult's hand

with the fingers together, i. e 89ff74cea8

Balneotherapy While it is considered distinct from hydrotherapy, there are some overlaps in practice and in underlying principles. severe, chronic plaque psoriasis. Balneotherapy may involve hot or cold water, massage through moving water, relaxation, or stimulation. Medicinal clays are also widely used, a practice known as 'fangotherapy'. Many mineral waters at spas are rich in particular minerals such as silica, sulfur, selenium, and radium. Since ancient times, humans have used hot springs, public baths and thermal medicine for therapeutic effects. A Cochrane review found low-quality evidence that salt bathing combined with UVB may relieve psoriasis severity compared Balneotherapy (Latin: balneum "bath") is a method of treating diseases by bathing, a traditional medicine technique usually practiced at spas 89ff74cea8

Etanercept Autoimmune diseases are caused by an overactive immune response. Tumor necrosis factor alpha (TNF α) is the "master

regulator" of the inflammatory (immune) response in many organ systems. It has US Food and Drug Administration (FDA) approval to treat rheumatoid arthritis, juvenile idiopathic arthritis and psoriatic arthritis, plaque psoriasis and ankylosing spondylitis. arthritis, juvenile idiopathic arthritis and psoriatic arthritis, plaque psoriasis and ankylosing spondylitis. Etanercept has the potential to treat these diseases by inhibiting TNF-alpha. Tumor necrosis factor alpha (TNF α) is the Etanercept, sold under the brand name Enbrel among others, is a biologic medical product that is used to treat autoimmune diseases by interfering with tumor necrosis factor (TNF), a soluble inflammatory cytokine, by acting as a TNF inhibitor 89ff74cea8

Dithranol It is available as creams, ointment or pastes in 0. It is available as creams, ointment or pastes in 0. The terms dithranol and anthralin are sometimes used synonymously. derivative, and is used in medications applied to the skin of people with psoriasis. 1 to 2% strengths (Drithocrema, Dithrocream, Zithranol-RR, Micanol, Psorlin, Dritho-Scalp, Anthraforte, Anthranol and Anthrascalp). 1 to 2%

strengths Dithranol (INN) or anthralin (USAN and former BAN) is a hydroxyanthrone, anthracene derivative, and is used in medications applied to the skin of people with psoriasis 89ff74cea8

Interleukin 17F This protein belongs to the interleukin 17 family and is mainly produced by the T helper 17 cells after their stimulation with interleukin 23. IL-17F plays an Interleukin 17F (IL-17F) is signaling protein that is in human which is encoded by the IL17F gene and is considered a pro-inflammatory cytokine. IL-17A and IL-17F is approved in Europe for the treatment of psoriasis; it may also be useful in the treatment of ankylosing spondylitis. However, IL-17F can be also produced by a wide range of cell types, including innate immune cells and epithelial cells 89ff74cea8

Impetigo herpetiformis Impetigo herpetiformis is a form of severe pustular psoriasis occurring in pregnancy which may occur during any trimester. The typical lesions are centrifugally Impetigo herpetiformis is a form of severe pustular psoriasis occurring in

pregnancy which may occur during any trimester 89ff74cea8

The IL17F gene is located on chromosome 6p12 and was discovered in 2001. This cytokine can be secreted as disulfide-linked homodimer or heterodimer. 89ff74cea8

Psoriatic onychodystrophy Elderly patients and Psoriatic onychodystrophy (also termed psoriatic nails or psoriatic onychopathy) is a nail disease which is common in those with psoriasis, with reported incidences varying from 10% to 78%. Elderly patients and those with psoriatic arthritis are more likely to have psoriatic nails. psoriatic onychopathy) is a nail disease which is common in those with psoriasis, with reported incidences varying from 10% to 78% 89ff74cea8

Etanercept is a fusion protein produced by recombinant DNA. It fuses the TNF receptor to the constant end of... 89ff74cea8
