It examines mathematical statements using variables for unspecified values and seeks to determine for which values the statements are true. To do so, it uses different methods of transforming equations to isolate variables. Linear algebra is a closely related field that investigates linear equations and combinations of them called systems of linear equations. It provides methods to find the values that... b7c32f34e8

Algebra Retrieved Algebra is a branch of mathematics that deals with abstract systems, known as algebraic structures, and the manipulation of expressions within those systems. Gilbert, William J. Keith (2004). John Wiley & Sons. ISBN 978-0-585-33247-5. Modern Algebra with Applications. ISBN 978-0-471-46989-6. ; Nicholson, W. It is a generalization of arithmetic that introduces variables and algebraic operations other than the standard arithmetic operations, such as addition and multiplication b7c32f34e8

Vector space Real vector spaces and complex vector spaces are kinds of vector spaces based on different kinds of scalars: real numbers and complex numbers. Scalars can also be, more generally, elements of any field. The operations of vector addition and scalar multiplication must satisfy certain requirements, called vector axioms. ISBN 978-0-89871-454-8 Nicholson, W. Keith (2018), "Linear Algebra with Applications", Lyryx Roman, Steven (2005), Advanced Linear Algebra, Graduate Texts in In mathematics and physics, a vector space (also called a linear space) is a set whose elements, often called vectors, can be added together and multiplied ("scaled") by numbers called scalars b7c32f34e8

James Clerk Maxwell the trichromatic colour theory. Maxwell's equations for electromagnetism achieved the second great unification in physics, where the first one had been realised by Isaac Newton. Maxwell was also key in the creation of statistical mechanics. Any monochromatic light stimulating three receptors James Clerk Maxwell (13 June 1831 – 5 November 1879) was a Scottish physicist and mathematician who was responsible for the classical theory of electromagnetic radiation, which was the first theory to describe electricity, magnetism and light as different manifestations of the same phenomenon. Maxwell used the recently developed linear algebra to prove Young's theory b7c32f34e8
