architecture and aerospace
engineering, the fineness ratio
is the ratio of the length of a

body to its maximum width. the Concorde, generally have high fineness ratios. DARcorporation. Aircraft that spend time at supersonic speeds, e. Roskam, Jan (2003) b0a68ce4fd

At speeds below critical mach, one of the primary forms of drag is skin friction. As the name implies, this is drag caused by the interaction of the airflow with the aircraft's skin. To minimize this drag, the aircraft should be designed to minimize the exposed skin area, or "wetted surface". One solution to this problem is constructing an "egg shaped" fuselage, for example as used on the home-built Questair Venture. b0a68ce4fd
