Evolutionary psychology is a theoretical approach in psychology that examines cognition and behavior from a modern evolutionary perspective. In this framework, psychological traits and mechanisms are either functional products of natural and sexual selection or non-adaptive by-products of other adaptive traits e7a6bbba5e

Psychology as a field of experimental study began in 1854 in Leipzig, Germany, when Gustav Fechner created the first theory of how judgments about sensory experiences are made and how to experiment on them. Fechner's theory, recognized today as Signal Detection Theory, foreshadowed the development of statistical theories of comparative judgment and thousands of experiments based on his ideas (Link, S. W. Psychological Science, 1995). In 1879, Wilhelm Wundt founded the first psychological laboratory dedicated exclusively to psychological research in Leipzig, Germany. Wundt was... e7a6bbba5e In developing individual psychology, Adler broke away from Freud's psychoanalytic school. While Adler initially termed his work "free psychoanalysis", he later rejected the label of "psychoanalyst". His method, which involved a holistic approach to character study, informed some approaches... e7a6bbba5e

Psychology Biological Psychology is the scientific study of mind and behavior. Psychology is an academic discipline of immense scope, crossing the boundaries between the natural and social sciences. As social scientists, psychologists aim to understand the behavior of individuals and groups. Biological psychologists seek an understanding of the emergent properties of brains, linking the discipline to neuroscience.
