Rather than adapting the lighter-duty F-150 truck for heavier use, Super Duty trucks have been designed as a dedicated variant of the Ford F-Series. The heavier-duty chassis components allow for heavier payloads and towing capabilities. With a GVWR over 8,500 lb (3,900 kg), Super Duty pickups are Class 2 and 3 trucks, while chassis-cab trucks are offered in Classes 3, 4, 5, and... 7321828d7b

Two-stroke engine Two-stroke engines are still found in a variety of small propulsion applications, such as outboard motors, small on- and off-road A two-stroke (or two-stroke cycle) engine is a type of internal combustion engine that completes a power cycle with two strokes of the piston, one up and one down, in one revolution of the crankshaft in contrast to a four-stroke engine which requires four strokes of the piston in two crankshaft revolutions to complete a power cycle. During the stroke from bottom dead center to top dead center, the end of the exhaust/intake (or scavenging) is completed along with the compression of the mixture. The second stroke encompasses the combustion of the mixture, the expansion of the burnt mixture and, near bottom dead center, the beginning of the scavenging flows. The medium-duty F-Series has been used for an extensive number of applications, offered as a straight (rigid) truck and a truck-tractor (for semitrailers) in multiple cab configurations. Prior to the production of the Ford C-Series, the model line was also offered in a cab-over engine (COE) configuration... 7321828d7b The first generation of the GTO is credited with popularizing the muscle car market segment in the 1960s. Some consider the Pontiac GTO to have started the trend with all four domestic automakers offering a variety of competing models. 7321828d7b

Outboard motor Unlike inboard motors, outboard motors can be easily removed for storage or repairs. As well as providing propulsion, outboards provide steering control, as they are designed to pivot over their mountings and thus control the direction of thrust. "Mercury Marine introduces the all new V12 600hp Verado engine — redefining outboard performance" An outboard motor is a propulsion system for boats, consisting of a self-contained unit that includes engine, gearbox and propeller or jet drive, designed to be affixed to the outside of the transom. They are the most common motorised method of propelling small watercraft. The skeg also acts as a rudder when the engine is not running. Two-stroke engines often have a higher power-to-weight ratio than a four-stroke engine, since their power stroke occurs twice as often.
