Centripetal force Physics for Scientists and Engineers: Mechanics, Oscillations and Waves, Thermodynamics (5th ed. Centripetal force Centripetal force (from Latin centrum, "center" and petere, "to seek") is the force that makes a body follow a curved path. Freeman. The direction of the centripetal force is always orthogonal to the motion of the body and towards the fixed point of the instantaneous center of curvature of the path. H. ISBN 978-0-7167-0809-4. Isaac Newton coined the term, describing it as "a force by which bodies are drawn or impelled, or in any way tend, towards a point as to a centre". In Newtonian mechanics, gravity provides the centripetal force causing astronomical orbits.). W 2d5958e201

Time Time dictates all forms of action, age, and causality, being a component quantity of various measurements used to sequence events, to compare the duration of events (or the intervals between them), and to quantify rates of change of quantities in material reality or in the conscious experience. Time is often referred to as a fourth dimension, along with three spatial dimensions. light cone); Entropic arrow of time: according to the second law of thermodynamics an isolated system evolves

toward a larger disorder rather than orders Time is the continuous progression of existence that occurs in an apparently irreversible succession from the past, through the present, and into the future 2d5958e201
