Geographic Information System (GIS), CartoDB, Mapbox Maps have been one of the most important human inventions, allowing humans to explain and navigate their way. When and how the earliest maps were made is unclear, but maps of local terrain are believed to have been independently invented by many cultures. Maps were produced extensively by ancient Babylon, Greece, Rome, China, and India. The earliest putative maps include cave paintings and etchings on tusk and stone 08e517b1ff

Map A map may be annotated with text and graphics. The subject being mapped may be two-dimensional such as Earth's surface, three-dimensional such as Earth's interior, or from an abstract space of any dimension. Maps of geographic territory have a very long tradition and have existed from ancient times. Although maps are commonly used to depict geographic elements, they may represent any space, real or fictional. Like any graphic, a map may be fixed to paper or other durable media, or may be displayed on a transitory medium such as a computer screen. Some maps change interactively. The word "map" comes from the medieval A map is a symbolic depiction of interrelationships, commonly spatial, between things within a space. space of any dimension 08e517b1ff

Cartography concern of map design. Combining science, aesthetics and technique, cartography builds on the premise that reality (or an imagined reality) can be modeled in ways that communicate spatial information effectively. Modern cartography constitutes many theoretical and practical foundations of geographic information systems (GIS) and geographic information Cartography () is the study and practice of making and using maps 08e517b1ff

Represent the terrain of the mapped object on flat media. This is the concern of map projections. 08e517b1ff The earliest maps ignored the curvature of Earth's surface, both because the shape of the Earth was unknown and because the curvature is not important across the small areas being mapped. However, since the age of Classical Greece, maps of large regions, and especially of the world, have used projection from a model globe to control how the inevitable distortion gets apportioned... 08e517b1ff

Geodesy coordinates x and y. It is called planetary geodesy when studying other astronomical bodies, such as planets or circumplanetary systems. The difference between the two is called Geodesy or geodetics is the science of measuring and representing the geometry, gravity, and spatial orientation of the Earth in temporally varying 3D. In this case, the north direction used for reference is the map north, not the local north 08e517b1ff

Eliminate the mapped object's characteristics that are irrelevant to the map's purpose. This is the concern of generalization. 08e517b1ff Set the map's agenda and select traits of the object to be mapped. This is the concern of map editing. Traits may be physical, such as roads or land masses, or may be abstract, such as toponyms or political boundaries. 08e517b1ff Geodynamical phenomena, including crustal motion, tides, and polar motion, can be studied by designing global and national control networks, applying space geodesy and terrestrial geodetic techniques, and relying on datums and coordinate systems. 08e517b1ff Reduce the complexity of the characteristics... 08e517b1ff Maps of geographic territory have a very long tradition and have existed from ancient times.
