based replacement for the Power Mac line and had two dual-core Xeon Woodcrest
processors and a rectangular tower case carried over from the Power Mac G5. It was
updated on April 4, 2007, by a dual quad-core Xeon Clovertown model, then on
January 8, 2008, by a dual quad-core Xeon Harpertown model. Revisions in 2010 and
2012 revisions had Nehalem-EP/Westmere-EP architecture Intel Xeon processors.

CE marking that is not compliant or offer it for sale. It is not a quality indicator or a certification mark. The CE marking is required for goods sold in the European Economic Area (EEA); goods sold elsewhere may also carry the mark. For example, most electrical products must comply with the Low Voltage Directive and the EMC Directive, among The presence of the CE marking on commercial products indicates that the manufacturer or importer affirms the goods' conformity with European health, safety, and environmental protection standards

Installations are distinguished by a number of criteria, such as voltage (high, low, extra low), phase (single or three-phase), nature of electrical signal (power, data), type and design of cable (conductors and insulators used, cable design, solid/fixed or stranded/flexible, intended use, protective materials), circuit design (ring, radial), and so on.

Printed circuit board Another manufacturing process adds vias, metal-lined drilled
holes that enable electrical interconnections between conductive layers, to boards
with more than a single side. "Analog, RF and EMC Considerations in Printed
Wiring Board (PWB) Design" (PDF). PCBs are used to connect or "wire"
components to one another in an electronic circuit. Revision 5 A printed circuit board
(PCB), also called printed wiring board (PWB), is a laminated sandwich structure of
conductive and insulating layers, each with a pattern of traces, planes and other
features (similar to wires on a flat surface) etched from one or more sheet layers of
copper laminated onto or between sheet layers of a non-conductive substrate.
Retrieved May 9, 2022. Colotti, James (2022). Electrical components may be fixed to
conductive pads on the outer layers, generally by soldering, which both electrically
connects and mechanically fastens the components to the board. March 8, 2022
