Chameleon (2009). The Chameleon Handbook. ISBN 0764141422. The members of this family are best known for their distinct range of colours, being capable of colour-shifting camouflage. For some, it is more of a shift of brightness (shades of brown); for others, a plethora of colour-combinations (reds, yellows, greens, blues) can be seen. "Scientists find Madagascar chameleon Chameleons or chamaeleons (family Chamaeleonidae) are a distinctive and highly specialized clade of Old World lizards with 200 species described as of June 2015. 3rd Edition. Friedrich The diesel engine, named after the German engineer Rudolf Diesel, is an internal combustion engine in which ignition of diesel fuel is caused by the elevated temperature of the air in the cylinder due to mechanical compression; thus, the diesel engine is called a compression-ignition engine (or CI engine). pp. 501 Jeff Hartman (September 9, 2023). This contrasts with engines using spark plug-ignition of the air-fuel mixture, such as a petrol engine (gasoline engine) or a gas engine (using a gaseous fuel like natural gas or liquefied petroleum gas). p d8c6c6aa29

Energy efficiency in transport Retrieved 27 June 2021. Express. The energy input might be rendered in several different types depending on the type of propulsion, and normally such energy is presented in liquid fuels, electrical energy or food energy. The inverse of the energy efficiency in transport is the energy consumption in transport. The energy efficiency is also occasionally known as energy intensity. "Demonstration of Caterpillar C-10 Duel-Fuel Engines in MCI 102DL3 Commuter Buses" (PDF). 7 December 2020. National The energy efficiency in transport is the useful travelled distance, of passengers, goods or any type of load; divided by the total energy put into the transport propulsion means d8c6c6aa29

Eurasian blue tits, usually resident and non-migratory birds, are widespread and a common resident breeder throughout temperate and subarctic Europe and the western Palearctic in deciduous or mixed woodlands with a high proportion of oak. They usually nest in tree holes, although they easily adapt to nest boxes where necessary. Their main rival for nests and in the search for food is the larger and more common great tit (*Parus major*). d8c6c6aa29

This species, like most bustards, is a ground-dwelling bird and an opportunistic omnivore. Male kori bustards, which can be more than twice as heavy as the female, attempt to breed with as many females as possible and take no part in the raising of the young. The nest is a shallow hollow in the earth, often disguised by nearby obstructive objects such as
