Properties of concrete inclusion of pozzolans such as flyash, and supplementary cementitious materials (SCMs) such as slag cement. The compressive strength is typically controlled with the ratio of water to cement when forming the concrete, and tensile strength is increased by additives, typically steel, to create reinforced concrete. Strength gain depends on the type of mixture, its constituents Concrete has relatively high compressive strength (resistance to breaking when squeezed), but significantly lower tensile strength (resistance to breaking when pulled apart). In other words we can say concrete is made up of sand (which is a fine aggregate), ballast (which is a coarse aggregate), cement (can be referred to as a binder) and water (which is an additive) b6c79847c3
