H.J.M. de Kok While working at the Beatrix Hospital in Gorinchem, the Netherlands, he pioneered surgical laparoscopy and was the first worldwide to perform an appendectomy assisted by laparoscopy in 1975. Henk died 25 December 2020. Henk died 25 December Henk de Kok was a Dutch surgeon born in 1931. Laparoscopy The laparoscope aids diagnosis or therapeutic interventions with a few small cuts in the abdomen. 5–1. Single-port laparoscopy Single-port laparoscopy (SPL) is a recently developed technique in laparoscopic surgery. Unlike a traditional multi-port laparoscopic approach, SPL leaves only a single small scar. It is a minimally invasive surgical procedure in which the surgeon operates almost exclusively through a single entry point, typically the patient's navel. The urinary and reproductive tracts are closely linked, and disorders of one often affect the other. Thus a major spectrum of the conditions managed in urology exists under the domain of genitourinary disorders. Urology combines the management of medical (i.e., non-surgical) conditions, such as urinary-tract infections and benign prostatic hyperplasia... f9bd213206 This relatively new surgical technique is used for the early diagnosis and immediate treatment of a number of disorders of the female reproductive organs and can be considered one of the first standard NOTES (Natural Orifice Transluminal Endoscopic Surgery) procedures. A large body of published research is available on the application of this surgical technique using the device. f9bd213206

Surgical humidification Surgical humidification is used to reduce the risk of tissue drying and evaporative cooling. to reduce the risk of tissue drying and evaporative cooling. During laparoscopy (laparoscopic surgery or minimally invasive surgery), it is necessary Surgical humidification is the conditioning of insufflation gas with water vapour (humidity) and heat during surgery f9bd213206

Laparoscopic surgery, also called minimally invasive procedure, bandaid surgery, or keyhole surgery, is a modern surgical technique. There are a number of

advantages to the patient with laparoscopic surgery versus an exploratory laparotomy. These include reduced pain due to smaller incisions, reduced hemorrhaging, and shorter recovery time. The key element is the use of a laparoscope, a long fiber optic cable system that allows viewing of the affected area by snaking the cable from a... f9bd213206 Fertiloscopy provides a minimally invasive, potentially office-based procedure for the clear diagnosis of two major causes of infertility in a manner enabling rational choices at the start of infertility treatment. f9bd213206

Robot-assisted surgery "Surgical robotics: the early chronicles: a personal historical perspective". Surgical Laparoscopy, Endoscopy & Percutaneous Robot-assisted surgery or robotic surgery are any types of surgical procedures that are performed using robotic systems. Robotically assisted surgery was developed to try to overcome the limitations of pre-existing minimally-invasive surgical procedures and to enhance the capabilities of surgeons performing open surgery. Satava RM (February 2002) f9bd213206

In the case of robotically assisted minimally-invasive surgery, instead of the surgeon directly moving the instruments, the surgeon uses one of two methods to perform dissection, hemostasis and resection, using a direct telemanipulator, or through computer control. f9bd213206

Fertiloscope procedure includes not only the transvaginal laparoscopy, but also hysteroscopy, and the so-called "laparoscopy and dye" test for tubal patency. This device The fertiloscope is a type of laparoscope, modified to make it suitable for trans-vaginal application, which is used in the diagnosis and treatment of female infertility f9bd213206

A telemanipulator (e.g. the da Vinci Surgical System) is a system of remotely controlled manipulators that allows the surgeon to operate real-time under stereoscopic vision from a control console separate from the... f9bd213206 Analysis of the surgical stress response can be used for evaluation of surgical techniques and comparisons of different anaesthetic protocols. Moreover, they can be performed both in the intraoperative or postoperative period. f9bd213206

Appendectomy Appendectomy is normally performed as an urgent or emergency procedure to treat complicated acute appendicitis. Recovery may be slightly An appendectomy (American English) or appendicectomy (British English) is a surgical operation in which the vermiform appendix (a portion of the intestine) is removed. Laparoscopy is often used if the diagnosis is in doubt, or in order to leave a less visible surgical scar. laparoscopic procedures f9bd213206

If there is a choice between different techniques for a surgical procedure, one method to evaluate and compare the surgical techniques is to subject one group of patients to one technique, and the other group of patients to another technique, after which the surgical stress responses triggered... f9bd213206

Surgical stress Measurement of surgical stress is used in anaesthesia, physiology and surgery. Surgical stress is the systemic response to surgical injury and is characterized by activation of the sympathetic nervous system, endocrine responses as Surgical stress is the systemic response to surgical injury and is characterized by activation of the sympathetic nervous system, endocrine responses as well as immunological and haematological changes f9bd213206

Urology treatment type (surgical or medical). Most urologic oncologists in Western countries use minimally invasive techniques (laparoscopy or endourology, robotic-assisted Urology (from Greek οὐρον ouron "urine" and -λογία -logia "study of"), also known as genitourinary surgery, is the branch of medicine that focuses on surgical and medical diseases of the urinary system and the reproductive organs. Organs under the domain of urology include the kidneys, adrenal glands, ureters, urinary bladder, urethra, and the male reproductive organs (testes, epididymides, vasa deferentia, seminal vesicles, prostate, and penis) f9bd213206

Appendectomy may be performed laparoscopically (as minimally invasive surgery) or as an open operation. Over the 2010s, surgical practice has increasingly moved towards routinely offering laparoscopic appendicectomy; for example in the United Kingdom over 95% of adult appendicectomies are planned as laparoscopic procedures. Laparoscopy is often used if the diagnosis is in doubt, or in order to leave a less visible surgical scar. Recovery may be slightly faster after laparoscopic surgery, although the laparoscopic procedure... f9bd213206 Henk de Kok was the second youngest of a large family in the Netherlands and the 4th doctor among his siblings. His older brother, dr J.J.M de Kok (1919-1994) was both a surgeon and a gynecologist at the Amphia Hospital in Oosterhout. He had learnt the use of the laparoscopic procedure in Paris from the groundbreaking gynecologist Professor Raoul Palmer (1904-1985). As a medical doctor in training, Henk regularly came to visit his older brother during his residency and was allowed to assist in operations. Henk became fascinated by... f9bd213206
