Time Time dictates all forms of action, age, and causality, being a component quantity of various measurements used to sequence events, to compare the duration of events (or the intervals between them), and to quantify rates of change of quantities in material reality or in the conscious experience. light cone); Entropic arrow of time: according to the second law of thermodynamics an isolated system evolves toward a larger disorder rather than orders Time is the continuous progression of existence that occurs in an apparently irreversible succession from the past, through the present, and into the future. Time is often referred to as a fourth dimension, along with three spatial dimensions 136859f1b1
