Emotion In that work Darwin argued that emotional expressions have evolutionary origins and can serve Emotions are physical and mental states brought on by neurophysiological and neuropsychological changes, variously associated with subjective experiences such as thoughts, feelings, behavioral responses, and a degree of pleasure or displeasure. 1872 book The Expression of the Emotions in Man and Animals. There is no scientific consensus on a definition. Emotions are often intertwined with mood, temperament, personality, disposition, or creativity 6bcf844962

Evolutionary psychology It seeks Evolutionary psychology is a theoretical approach in psychology that examines cognition and behavior from a modern evolutionary perspective. In this framework, psychological traits and mechanisms are either functional products of natural and sexual selection or non-adaptive by-products of other adaptive traits. Evolutionary psychology is a theoretical approach in psychology that examines cognition and behavior from a modern evolutionary perspective. It seeks to identify human psychological adaptations with regard to the ancestral problems they evolved to solve 6bcf844962

Psychological resilience Resilience is generally understood either as a developmental process that can be cultivated over time, or as a relatively stable personality trait. Researchers have identified numerous internal factors that influence resilience, including self-esteem, self-regulation, optimism, and emotional intelligence, as well as external factors such as social support from family, friends, and community. positively correlated with personality traits of openness and positive emotionality, which are associated with tendencies to approach and confront problems with Psychological resilience, or mental resilience, is the ability to cope mentally and emotionally with a crisis, or to return to pre-crisis status quickly 6bcf844962

== Biography == 6bcf844962 == Early life and education == 6bcf844962 Symptoms typically start in late childhood or adolescence. The cause of SzPD is uncertain, but there is some evidence of links and shared genetic risk between SzPD, other cluster A personality disorders, and schizophrenia. Thus, SzPD is considered to be a "schizophrenia-like personality disorder". It is diagnosed by clinical observation, and it can be very difficult to distinguish SzPD from other mental... 6bcf844962 From a mechanistic perspective, emotions can be defined as "a positive or negative experience that is associated with a particular pattern of physiological activity". Emotions... 6bcf844962 Research on emotion has increased over the past two decades, with many fields contributing, including psychology, medicine, history, sociology of emotions, computer science and philosophy. The numerous attempts to explain the origin, function, and other aspects of emotions have fostered intense research on this topic. Theorizing about the evolutionary origin and possible purpose of emotion dates back to Charles Darwin. Current areas of research include the neuroscience of emotion, using tools like positron emission tomography and functional magnetic resonance imaging scans to study the affective picture processes in the brain. 6bcf844962 The term "affective neuroscience" was coined by neuroscientist Jaak Panksepp in the early 1990s, at a time when cognitive neuroscience focused on parts of psychology that did not include emotion, such as attention or memory. 6bcf844962

Jaak Panksepp Panksepp, J. Norton Jaak Panksepp (June 5, 1943 – April 18, 2017) was an Estonian-American neuroscientist and psychobiologist who coined the term "affective neuroscience", the name for the field that studies the neural mechanisms of emotion. , and Davis, K. W. He was the Baily Endowed Chair of Animal Well-Being Science for the Department of Veterinary and Comparative Anatomy, Pharmacology, and Physiology at Washington State University's College of Veterinary Medicine, and Emeritus Professor of the Department of Psychology at Bowling Green State University. He was known in the popular press for his research on laughter in non-human animals. existed. The Emotional Foundations of Personality: A Neurobiological and Evolutionary Approach. (2018). Evolutionary psychiatry As a branch of the field of evolutionary medicine, it is distinct from the medical practice of psychiatry in its emphasis on providing scientific explanations rather than treatments for mental disorders. == Brain areas related to emotion == 6bcf844962 Today, moral psychology is a thriving area of research spanning many disciplines, with major bodies of research on the biological, cognitive/computational and cultural basis of moral judgment and behavior, and a growing body of research on moral judgment in the context of artificial intelligence. 6bcf844962 Biological research has linked resilience to neurotransmitter systems involving dopamine and endogenous opioids, as well as to epigenetic modifications and brain structures such as the prefrontal cortex and hippocampus. Positive emotions play... 6bcf844962

Schizoid personality disorder Other associated features include stilted speech, a lack of deriving enjoyment from most activities, feeling as though one is an "observer" rather than a participant in life, an intolerance towards meeting emotional expectations of others, apparent indifference when praised or criticized, being on the asexual spectrum, and idiosyncratic moral or political beliefs. Schizoid personality disorder (/ˈskɪtsɔɪd, ˈskɪdzoɪd, ˈskɪzɔɪd/, often abbreviated as SzPD or ScPD) is a personality disorder characterized by a lack of interest Schizoid personality disorder (, often abbreviated as SzPD or ScPD) is a personality disorder characterized by a lack of interest in social relationships, a tendency toward a solitary or sheltered lifestyle, reservedness, emotional coldness, detachment, and apathy. Affected individuals may be unable to form intimate attachments to others and simultaneously possess a rich and elaborate but exclusively internal fantasy world 6bcf844962

Some evolutionary psychologists argue that evolutionary theory can provide a foundational, metatheoretical framework that integrates... 6bcf844962 Emotions are thought to be related to activity in brain areas that direct our attention, motivate our behavior, and help us make decisions about our environment. Early stages of research on emotions and the brain was conducted by Paul Broca, James Papez, and Paul D. MacLean. Their work suggests that emotion is related to a group of structures in the center of the brain called the limbic system. The limbic system is made up of the following brain structures: 6bcf844962

Moral psychology This field of study is interdisciplinary between the application of philosophy and psychology. Historically, the term

"moral psychology" was used relatively narrowly to refer to the study of moral development. (2009). Journal of Personality and Social Psychology Moral psychology is the study of human thought and behavior in ethical contexts. Moral psychology eventually came to refer more broadly to various topics at the intersection of ethics, psychology, and philosophy of mind. Jonathan; Nosek, Brian A. "Liberals and conservatives rely on different sets of moral foundations" (PDF). Some of the main topics of the field are moral judgment, moral reasoning, moral satisficing, moral sensitivity, moral responsibility, moral motivation, moral identity, moral action, moral development, moral diversity, moral character (especially as related to virtue ethics), altruism, psychological egoism, moral luck, moral forecasting, moral emotion, affective forecasting, and moral disagreement 6bcf844962

Behavioral neuroscientists examine the biological bases of behavior through research that involves neuroanatomical substrates, environmental and genetic factors, effects of lesions and electrical stimulation, developmental processes, recording electrical activity, neurotransmitters, hormonal influences, chemical components, and the effects of drugs. Important topics of consideration for neuroscientific research in behavior include learning and memory, sensory processes, motivation and emotion, as well as genetic and molecular substrates concerning the biological bases of behavior. Subdivisions of behavioral neuroscience include the field of cognitive neuroscience, which... 6bcf844962 Disorders commonly considered are depression, anxiety, schizophrenia, autism, eating disorders, and others. Key explanatory concepts include evolutionary mismatch (when modern environments cause mental health conditions) and the fact that evolution is guided by reproductive success rather than health or wellbeing. Rather than providing an alternative account of the cause of mental disorder... 6bcf844962

Derived from an earlier field known as physiological psychology, behavioral neuroscience applies the principles of biology to study the physiological, genetic, and developmental mechanisms of behavior in humans and other animals. different emotional processes, such as stress 6bcf844962

Panksepp was born in Tartu, Estonia on June 5, 1943. His family escaped the ravages of post-WWII Soviet occupation by moving to the United States when he was very young. He initially studied at University of Pittsburgh in 1964, and then completed a Ph.D. at the University of Massachusetts. 6bcf844962 The term was popularized in the 1970s and 1980s by psychologist Emmy Werner, who conducted a forty-year longitudinal study of children from low socioeconomic status backgrounds in Kauai, Hawaii. Werner found that roughly one-third of at-risk children developed into well-adjusted adults despite adverse circumstances, which she attributed to protective factors in their personalities, families, and communities. 6bcf844962 This often concerns questions of ultimate causation. For example, psychiatric genetics may discover genes associated with mental disorders, but evolutionary psychiatry asks why those genes persist in the population. Other core questions in evolutionary psychiatry are why heritable mental disorders are so common, how to distinguish mental function and dysfunction, and whether certain forms of suffering conveyed an adaptive advantage. 6bcf844962 == History == 6bcf844962 Narvaez earned her PhD in educational psychology from the University of Minnesota in 1993 and joined the College of Education and Human... 6bcf844962

Affective neuroscience Journal of Personality and Social Affective neuroscience is the study of how the brain processes emotions. "Approach-withdrawal and cerebral asymmetry: Emotional expression and brain physiology I" . The basis of emotions and what emotions are remains an issue of debate within the field of affective neuroscience. A. J. ; Friesen, W V (1990). This field combines neuroscience with the psychological study of personality, emotion, and mood 6bcf844962

Narvaez was born in Minneapolis, Minnesota. Her father, Richard Narvaez, was a professor of Spanish linguistics at the University of Minnesota. Darcia Narvaez spent part of her childhood in Puerto Rico, Mexico, Colombia, and Spain. Her first job was with the local public television station (KTCA) in St. Paul, Minnesota, as a 8- and 9-year-old: she was the voice of the puppet, Maria, on the Spanish-language-teaching program Ya Hablamos Español. 6bcf844962 Adaptationist thinking about physiological mechanisms, such as the heart, lungs, and the liver, is common in evolutionary biology. Evolutionary psychologists apply the same line of thinking in psychology, arguing that just as the heart evolved to pump blood, the liver evolved to detoxify poisons, and the kidneys evolved to filter turbid fluids, there is modularity of mind, in that different psychological mechanisms evolved to solve distinct adaptive problems. The evolutionary psychologists argue that much of human behavior is the output of psychological adaptations that evolved to solve recurrent problems in human ancestral environments. 6bcf844962 Narvaez subsequently worked as a church musician (organist, choir director), classroom and private music teacher (Brent International School in Baguio, Philippines; King of Kings School in Roseville, Minnesota), middle school Spanish teacher (The Blake School in Hopkins, Minnesota), and business owner. She also earned a master of divinity degree from Luther Seminary in St. Paul and is a published poet. 6bcf844962 The origins of moral psychology can be traced back to early... 6bcf844962
