Some equipment is specifically for these functions, both during planning before the dive and during the dive. Other equipment is used to mark the underwater position of the diver, as a position reference in low visibility or currents, or to assist the diver's ascent and control the depth. 491d852421

Saturation diving In 1999 the NORSOK U100 standard was Saturation diving is an ambient pressure diving technique which allows a diver to remain at working depth for extended periods during which the body tissues become saturated with metabolically inert gas from the breathing gas mixture. Unlike other ambient pressure diving, the saturation diver is only exposed to external ambient pressure while at diving depth. harmonise the saturation tables to be used in the Norwegial sector of the North Sea used input from five contractors. The ratio of productive working time at depth to unproductive decompression time is thereby

increased, and the health risk to the diver incurred by decompression is minimised. Once saturated, the time required for decompression to surface pressure will not increase with longer exposure. The diver undergoes a single decompression to surface pressure at the end of the exposure of several days to weeks duration
