3 49fe510fe8 Osteopathic manipulation is the core set of techniques in
osteopathy. Parts of osteopathy, such as craniosacral therapy, have
been described by Quackwatch as having no therapeutic value and
have been labeled by them as pseudoscience and quackery. The
techniques are based on an ideology created by Andrew Taylor Still
(1828–1917) which posits the existence of a "myofascial continuity"—a

Counterstrain Lawrence Jones DO in 1955 and was originally called "Spontaneous Release by Positioning," before being termed "strain-counterstrain. " In this technique, the Counterstrain is a technique used in osteopathic medicine, osteopathy, physical therapy, massage therapy, and chiropractic to treat somatic dysfunction. Strain-counterstrain is also known as the Jones technique, (correction spontaneous by position), and spontaneous release. It is a system of diagnosis and treatment that uses tender points, which are produced by trauma, inflammation, postural strain, or disease, to identify structures to manipulate. The manipulation uses light pressure to decompress the local nociceptors and mechanoreceptors responsible for the sensation of pain, returning central sensitization to its normal state. This technique extends Strain-counterstrain, a technique inhibits the reflexes by putting the tissues in a position of ease directly opposite to that of the reflex 49fe510fe8

Strain and counterstrain Following this "release" there is an immediate reduction of pain and tension in the involved tissue. O. It is a hands-on treatment Within manual therapy, Strain-Counterstrain is a type of "passive positional release" created in 1955 by Lawrence Jones, D. During the procedure, the involved tissue is "slackened" causing a

relaxation of the "spasm" which, in turn, allows local areas of inflammation, trapped within the painful tissue to dissipate. O. This gentle and painless technique. It is a hands-on treatment that attempts to alleviate muscle and connective tissue tightness by the use of very specific treatment positions held for 90 seconds (can be held for up to 3 minutes in neurological patients). Within manual therapy, Strain-Counterstrain is a type of "passive positional release" created in 1955 by Lawrence Jones, D. This relaxation aims to restore normal joint mobility and release other structures in the region that may have been compressed
