Pi 14159, that is the ratio of a circle's circumference to its diameter.

Differential Geometry. Kobayashi, Shoshichi; Nomizu, Katsumi (1996). It appears in many formulae across mathematics and physics, and some of these formulae are commonly used for defining π , to avoid relying on the definition of the length of a curve. Vol. 3. Foundations of Differential Geometry. Vol. Publish or Perish Press. ; Chapter 6. 2 (New ed The number π (; spelled out as pi) is a mathematical constant, approximately equal to 3

Correlation (projective geometry) 5
Correlations In projective geometry, a correlation is a transformation of a d -dimensional projective space that maps subspaces of dimension k to subspaces of dimension $d - k - 1$, reversing inclusion and preserving incidence. Linear Algebra and Geometry (2nd ed. Bumcroft (1969), Modern Projective Geometry, Holt, Rinehart, and Winston, Chapter 4.), p. 104 Robert J. Correlations are also called reciprocities or reciprocal transformations 1557aac646

Project Orion (nuclear propulsion)
Following preliminary ideas in the 1940s, and a classified paper co-authored by physicist Stanisław Ulam in 1955, ARPA agreed to sponsor and fund the program in July 1958. mathematician A test that was similar to the test of a pusher plate occurred as an accidental side effect of a nuclear containment test called "Pascal-B" conducted Project Orion was a study conducted in the 1950s and 1960s by the United States Air Force, DARPA,

and NASA into the viability of a nuclear pulse spaceship that would be directly propelled by a series of atomic explosions behind the craft 1557aac646

Schema (Kant) (New York: Holt, Rinehart and Winston, 1966), Part One, III, 9, "Doctrine of Ideas," p. 80, "...the relation between a particular and the form which it exemplifies In Kantian philosophy, a transcendental schema (plural: schemata; from Ancient Greek: σχῆμα, 'form, shape, figure') is the procedural rule by which a category or pure, non-empirical concept is associated with a sense impression. Transcendental schemata are supposedly produced by the imagination in relation to time. A private, subjective intuition is thereby discursively thought to be a representation of an external object 1557aac646

Statistics "description of a state, a country") is the discipline that concerns the collection, organization, analysis, interpretation, and presentation of data. Populations can be diverse groups of people or objects such as "all people living in a country" or "every atom

composing a crystal". In applying statistics to a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model to be studied. 1-3
Hays, William Lee, (1973) Statistics for the Social Sciences, Holt, Rinehart and Winston, p. Statistics deals with every aspect of data, including the planning of data collection in terms of the design of surveys and experiments. xii,

Early versions of the vehicle were designed for ground launch, but later versions were intended for use only in space. The design effort took place at General Atomics in San Diego, and supporters included Wernher von Braun, who issued a white paper advocating the idea. NASA also created a Mars mission profile based on the design, proposing a 125 day round trip carrying eight astronauts with...

John von Neumann 101. His analysis of

the structure of self-replication preceded the discovery of the structure of DNA. 2. 22 (2): 101-108. 0648. 101N. He was a pioneer in building the mathematical framework of quantum physics, in the development of functional analysis, and in game theory, introducing or codifying concepts including cellular automata, the universal constructor and the digital computer. Von Neumann had perhaps the widest coverage of any mathematician of his time, integrating pure and applied sciences and making major contributions to many fields, including mathematics, physics, economics, computing, and statistics. Acad. Proc. Natl. 22. doi:10. Sci. USA. JFM 62. John von Neumann (von NOY-mən; Hungarian: Neumann János Lajos ['nɔjmøn 'ja:nof 'lɔjɔʃ]; December 28, 1903 – February 8, 1957) was a Hungarian and American mathematician, physicist, computer scientist and engineer. Glucose It is the most abundant monosaccharide, a subcategory of carbohydrates. giving a positive reaction with the Fehling test. It is made from water and carbon dioxide

during photosynthesis by plants and most algae. Cyclic forms of glucose In solutions, the open-chain form of glucose (either "D-" or "L-") exists in Glucose is a sugar with the molecular formula $C_6H_{12}O_6$. Glucose is often abbreviated as Glc. It is used by plants to make cellulose, the most abundant carbohydrate in the world, for use in cell walls, and by all living organisms to make adenosine triphosphate (ATP), which is used by the cell as energy

Trachea : tracheae or tracheas), also known as the windpipe, is a cartilaginous tube that connects the larynx to the bronchi of the lungs, allowing the passage of air, and so is present in almost all animals' lungs. ISBN 978-0-03-910284-5. pp. 336-337. The trachea is formed by a number of horseshoe-shaped rings, joined together vertically by overlying ligaments, and by the trachealis muscle at their ends. The epiglottis closes the opening to the larynx during swallowing. (1998). Philadelphia, PA: Holt-Saunders International. The trachea extends from the larynx and branches into the two primary bronchi. Wasserthal, Lutz T. At the top of the trachea, the cricoid cartilage attaches it to the larynx. In energy metabolism, glucose is the most important source of energy in all organisms. Glucose for metabolism is stored as a polymer, in plants mainly as amylose and amylopectin, and in animals as glycogen. Glucose circulates in the blood of animals as blood sugar. The naturally occurring form is d-glucose, while its stereoisomer l-glucose... 1557aac646
