Strategic management Strategic management provides overall

direction to an enterprise and involves specifying the organization's objectives, developing policies and plans to achieve those objectives, and then allocating resources to implement the plans. In the field of management, strategic management involves the formulation and implementation of the major goals and initiatives taken by an organization's In the field of management, strategic management involves the formulation and implementation of the major goals and initiatives taken by an organization's managers on behalf of stakeholders, based on consideration of resources and an assessment of the internal and external environments in which the organization operates. Academics and practicing managers have developed numerous models and frameworks to assist in strategic decision-making in the context of complex environments and competitive dynamics. Strategic management is not static in nature; the models can

Fisheries management According to the Food and Agriculture Organization of the United Nations (FAO) in the 2001 Guidebook to Fisheries Management there is currently "no clear and generally accepted definitions of fisheries management". The management of fisheries is broadly defined as the set of tasks which guide vested parties and managers in the optimal use of aquatic renewable resources The management of fisheries is broadly defined as the set of tasks which guide vested parties and managers in the optimal use of aquatic renewable resources, primarily fish. Instead, the authors use a working definition, such that fisheries management is: The integrated process of information gathering, analysis, planning, consultation, decision-making, allocation of resources and formulation and

implementation, with necessary law enforcement to ensure environmental compliance, of regulations or rules which govern fisheries activities in order to ensure the continued productivity

There are many variations of self-management. In some variants, all the worker-members manage the enterprise directly through assemblies while in other forms workers exercise management functions indirectly through the election of specialist managers. Self-management may include worker supervision and...

Net present value The present value of a cash flow depends on the interval of time between now and the cash flow because of the Time value of money (which includes the annual effective discount rate). or initial cash investment, do not exceed the company's capital. It provides a method for evaluating and comparing capital projects or financial products with cash flows

spread over time, as in loans, investments, payouts from insurance contracts plus many other applications. NPV is a central tool in discounted cash flow (DCF) analysis and is a standard method. The net present value (NPV) or net present worth (NPW) is a way of measuring the value of an asset that has cashflow by adding up the present value of all the future cash flows that asset will generate.

Also related is quantitative investing, which relies on statistical and numerical models (and lately machine learning) as opposed...

Mathematical finance overlaps heavily with the fields of computational finance and financial engineering. The latter focuses on applications and modeling, often with the help of stochastic asset models, while the former focuses, in addition to analysis, on building tools of implementation for the models. 1dede22f26 In general, there exist two separate branches of finance that require advanced quantitative techniques: derivatives pricing on the one hand, and risk and portfolio

management on the other. 1dede22f26
