Utah, Martin Fleischmann and Stanley Pons, reported that their apparatus had produced
anomalous heat ("excess heat") of a magnitude they asserted would defy explanation except in
terms of nuclear processes. They further reported measuring small amounts of nuclear reaction

Cold fusion There is currently no accepted theoretical model that would allow cold fusion to occur. Since Cold fusion is a hypothesized type of nuclear reaction that would occur at, or near, room temperature. Physics Letters A, International Journal of Hydrogen Energy, and a number of Japanese and Russian journals of physics, chemistry, and engineering. It would contrast starkly with the "hot" fusion that is known to take place naturally within stars and artificially in hydrogen bombs and prototype fusion reactors under immense pressure and at temperatures of millions of degrees, and be distinguished from muon-catalyzed fusion 9a1dd68c82
