Security information and event management with these mandates is further reinforced by frameworks such as NIST SP 800-92, which outlines best practices for managing computer security logs. SIEM technology collects and aggregates data from various systems, allowing organizations to meet compliance requirements while safeguarding against threats. National Institute of Standards and Technology (NIST) definition for SIEM tool is application that provides the ability to gather security data from information system components and present that data as actionable information. Modern Security information and event management (SIEM) is a field within computer security that combines security information management (SIM) and security event management (SEM) to enable real-time analysis of security alerts generated by applications and network hardware. SIEM systems are central to security operations centers (SOCs), where they are employed to detect, investigate, and respond to security incidents 1b3a8b0e3e
