Turbofan Whereas all the air taken in by a turbojet passes through the combustion chamber and turbines, in a turbofan some of the air entering the nacelle bypasses these components. The word "turbofan" is a combination of references to the preceding generation engine technology of the turbojet and the additional fan stage. It consists of a gas turbine engine which adds kinetic energy to the air passing through it by burning fuel, and a ducted fan powered by energy from the gas turbine to force air rearwards. A turbofan can be thought of as a turbojet being used to drive a ducted fan, with both of these contributing to the thrust. Some notable examples of such designs are Boeing 787, Boeing 737 Max and Boeing 747-8 – on the Rolls-Royce Trent 1000 (787), General Electric A turbofan or fanjet is a type of airbreathing jet engine that is widely used in aircraft propulsion.
