Self-confidence is related to self-efficacy—belief in one's ability to accomplish a specific task or goal. “Towards an Understanding of Mental Toughness in Elite English Cricketers” 17 (3): 209–227. September 2005). Self-confidence involves a positive belief that one can generally accomplish what one wishes to do in the future. Confidence can be a self-fulfilling prophecy, as those without it may fail because they lack it, and those with it may succeed because they have it rather than because of an innate ability or skill. Self-confidence is trust in oneself. Self-confidence is not the same as self-esteem, which is an evaluation of one's worth. Journal of Applied Sport Psychology deb3a43166
