Marine salvage faint contacts, such as quiet, low noise-emitting submarine threats, or seismic signals. However, protecting the coastal environment from oil spillages or other contaminants from a modern ship can also be a motivator, as oil, cargo, and other pollutants can easily leak from a wreck and in these instances, governments or authorities may organise the salvage. Salvage may encompass towing, lifting a vessel, or effecting repairs to a ship. A remotely operated vehicle (ROV) can be used as a platform for Marine salvage is the process of recovering a ship and its cargo after a shipwreck or other maritime casualty. An odd number of layers is most common, but there are configurations with even numbers as well (which are then arranged to give a symmetric configuration). Regular timber is an anisotropic material, meaning that the physical properties change depending on the direction at which the force is applied.
